Phosphorus, Total	0.069	0.389	0.500	64	0.393	0.500	65	60-135	2	20

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

LOG-IN CHECKLIST

Reference SOP# MSL-A-001

Central File #: 31062 Sample No(s): (~~15~~ 5 1574-1627) Batch: (48)

Project Name: ENVVEST AMB 18 Project Manager: Brandenburger

TO BE COMPLETED BY PROJECT MANAGER (prior to arrival when possible)

Matrix: Seawater WP#

Special Instructions:

See LIMS Sample Tracking for archive/disposal information

TO BE COMPLETED UPON SAMPLE ARRIVAL/LOG-IN

Yes	No	N/A	Indicate in Appropriate Box		
☐	☐	☑	Custody seal present	Seal intact? YES NO	
☑	☐	☐	Cooler temperature (acceptable range: less than 6°C or solids:frozen) (if multiple coolers, note temp. of each cooler)		
☐	☐	☑	Project Manager notified of any custody/login discrepancies (cooler temp, sponsor codes, etc)		
☑	☐	☐	Were all chain of custody forms signed and dated?		
☑	☐	☐	Were samples filtered at MSL?	ALL ~~HALF~~ TMF	

Cooler 1: 4 °C
Cooler 2: 4 °C
Cooler 3: 4 °C
Cooler 4: 4 °C

Comment/Remedy:

Samples must be filtered prior to preservation!

Sample condition(s): (Acceptable) Other (explain):

Container type: (Teflon) (Poly) (Glass) Cap. Vial Baggie Other:

Notes:

Completed By: STRICKLAND Cooler Receipt Date/Time: 20150616 1645

SAMPLE PRESERVATION

☐ Sample(s) were preserved prior to arrival at MSL (noted on: CoC / Sample / per PM Instruction)

☐ Random pH checked for ~10% of samples (use dip paper) Sample IDs:

☐ Complete pH check required for project (use pH meter and record on pH Record form)

☑ Sample(s) were preserved at MSL

Type:
- ☑ 0.2% HNO3 Notes: Metals Lot# 1214010
- ☐ 0.5% HCl (Hg samples) Notes: Lot#
- ☑ (Refrigerate)/Freeze Notes: Outside Walkin - DIG/NUTES
- ☐ Other Notes:

TOC/DOC in Freezer 8

Completed By: Nikki Sokol Preservation Date/Time: 20150616 1800

TO BE COMPLETED BY PROJECT MANAGER (prior to arrival when possible)

Matrix: Sea Water WP#

Special Instructions:

See LIMS Sample Tracking for archive/disposal information

TO BE COMPLETED UPON SAMPLE ARRIVAL/LOG-IN

Yes	No	N/A	Indicate in Appropriate Box
		✓	Custody seal present Seal intact? YES NO
✓			Cooler temperature (acceptable range: less than 6°C or solids:frozen) (if multiple coolers, note temp. of each cooler)
		✓	Project Manager notified of any custody/login discrepancies (cooler temp, sponsor codes, etc)
✓			Were all chain of custody forms signed and dated?
✓			Were samples filtered at MSL? ALL (HALF) TMB

Cooler 1: 4 °C
Cooler 2: 4 °C
Cooler 3: 4 °C
Cooler 4: 4 °C

Comment/Remedy:

Samples must be filtered prior to preservation!

Sample condition(s): (Acceptable) Other (explain):

Container type: (Teflon) (Poly) (Glass) Cap. Vial Baggie Other:

Notes:

Completed By: STRUSOSS Cooler Receipt Date/Time: 20150617 1645

SAMPLE PRESERVATION

- [ ] Sample(s) were preserved prior to arrival at MSL (noted on: CoC / Sample / per PM Instruction)
- [ ] Random pH checked for ~10% of samples (use dip paper) Sample IDs:
- [ ] Complete pH check required for project (use pH meter and record on pH Record form)
- [✓] Sample(s) were preserved at MSL

Type:
- [✓] 0.2% HNO3 Notes: TME, DME Lot# 1214010
- [ ] 0.5% HCl (Hg samples) Notes: Lot#
- [✓] Refrigerate/Freeze Notes: TOC/DOC to Deep freezer, All others to Ref.
- [ ] Other Notes:

Completed By: STRUSOSS Preservation Date/Time: 20150617 1802

Storage Shelf: K-3-B

Data Qualifiers
Ambient Monitoring - AMB19
ENVVEST September 2015

DATA QUALIFIERS:

c	Exceeds DQO but meets contingency criteria of either:
1	SRM certified <10x MDL
2	Insufficient spiking level relative to native sample concentrations
U	Analyte not detected at or above the MDL, MDL reported
J	Analyte detected above the MDL, but less than the RL
--	Not analyzed
NA	Not applicable/available
N	Spiked sample recovery outside QC criterion of 70-130%
NC	Not Certified
&	Accuracy result outside QC criterion of ≤20% PD
*	Precision result outside QC criterion of <30%
NS	Sample not spiked for this analyte
B	Analyte detected in the method blank > RL
	and sample concentration < 10 times detected blank value
b	Data are blank corrected using the batch specific procedural blank
[1]	Reported from the nucleopore filtration method instead of GF/C filters
[2]	Seawater DOC CRM (LOT#03-12) and low carbon water (LCW) were purchased from University of Miami http://yyy.rsmas.miami.edu/groups/biogeochem/CRM.html
[3]	Sample bottle cracked, no data reported
[4]	The laboratory DI water was found to be elevated in OC. The samples were not impacted by the DI water issue. See the QC narrative for more discussion.
HTCO	High Temperature Catalytic Oxidation

QA/QC NARRATIVE

PROJECT: Sinclair and Dyes Inlet Ambient Monitoring, September 2015 (AMB19)

PARAMETER: Total and Dissolved Metals – Al, Cd, Cr, Cu, Ni, Pb, Zn, Hg
Total Suspended Solids (TSS), Salinity (OSAL), Dissolved Organic Carbon (DOC), and Total Organic Carbon (TOC)

LABORATORY: Battelle Marine Sciences Laboratory (MSL), Sequim, Washington

MATRIX: Seawater and Freshwater

SAMPLE CUSTODY AND PROCESSING: Samples were collected from Sinclair and Dyes Inlet region by MSL and the U.S. Navy on 09/15/2015 and 09/16/2015. Samples were hand delivered to MSL by the field team. All samples were received in good condition. Samples were assigned a Battelle Central File (CF) identification number (3106) and were entered into Battelle's sample tracking system. Upon receipt at MSL, the samples designated for total and dissolved metals (TME/DME) were shaken vigorously and approximately 500mL was filtered through a pre-cleaned 0.45µm polyvinylidene fluoride (PVDF) filter membrane inside a class 100 clean bench and the filtrate was transferred to a trace metal clean Teflon bottle. The dissolved and total fractions were each acidified to a pH of < 2.0 with double distilled nitric acid. The samples for TSS and OSAL were stored at 4.0±2°C in low density polyethylene bottles prior to analysis. The samples for TOC and DOC were collected in pre-cleaned glass and stored at -20°C until analyses.

The following lists information on sample receipt and processing activities:

Sample Receipt Dates:	09/15/15 and 09/16/15 EQP BLKS 09/04/15
Cooler temp. on arrival	All coolers were at 4.0±2°C
Collection dates	See Table
TSS analysis dates	09/17/15 and 09/18/15
OSAL analysis dates	09/17/15
CVAF analysis dates (Hg)	10/07/15, 10/08/15, 10/14/15, 10/15/15, 10/21/15
TRM Prep/Freshwater Analysis by ICP-MS (Al, Cd, Cr, Cu, Ni, Pb, Zn)	12/7/15
Fe/Pd Preconcentration Seawater Analysis by ICP-MS (Al, Cd, Cr, Cu, Ni, Pb, Zn)	10/01/15 and 10/05/15
TOC/DOC Analysis Date	10/05/15 through 10/07/15

QA/QC DATA QUALITY OBJECTIVES FOR SEAWATER SAMPLES:

Analyte	Analytical Method for Seawater	MS Range of Recovery	SRM Percent Difference	Replicate Precision	Method Detection Limits	Reporting Limits

Mercury	CVAF	70-130%	≤20%	≤30%	0.1 ng/L	0.32 ng/L

METHODS:

Seawater samples were analyzed for eight metals: aluminum (Al), cadmium (Cd), chromium (Cr), copper (Cu), nickel (Ni), lead (Pb), zinc (Zn), and mercury (Hg). Samples were submitted for analyses by two methods. Both freshwater and seawater samples were analyzed for Hg by Cold Vapor Atomic Fluorescence (CVAF) in accordance with Battelle SOP *MSL-I-013*, *Total Mercury in Aqueous Samples by CVAF*, following EPA Method 1631 revision E. The Hg data are reported in ng/L.

Seawater samples were analyzed for all other metals using a preconcentration via a precipitation step followed by reconstitution in a salt free solution in accordance with Battelle SOP *MSL-I-025, Methods of Sample Preconcentration: Iron and Palladium/APDC Coprecipitation and Borohydride (Fe/Pd) Reductive Precipitation for Trace Metals Analysis in Water.* Preconcentrated seawater samples were analyzed by Inductively Coupled Plasma-Mass Spectrometry (ICP-MS) in accordance with Battelle SOP *MSL-I-022, Determination of Elements in Aqueous and Digestate Samples by ICP/MS.* The base methods for this procedure are EPA Method 1638 and

METHODS (cont): EPA Method 1640.

Freshwater samples identified as < 5% seawater were analyzed for all metals, except Hg, by ICP-MS following the preparation method for total recoverable metals (TRM) described in EPA Method 1640. The analysis for Hg does not require a different method for freshwater versus saltwater.

The ICP-MS data were reported in units of µg/L. The required preconcentration procedure for seawater samples analyzed by ICP-MS includes the addition of chelating agents to induce precipitation of metals under specific conditions. Subsequently, reagents added to the samples should be of the purest quality to result in zero addition of metals to the seawater samples. Therefore the ICP-MS method includes a matrix match step to correct for trace impurities of metals added during the preconcentration step. In previous AMB data sets, the mean reagent blank for each analytical batch was subtracted from the reported sample concentration after the analyses were completed and data were qualified with a "b". The new ICP-MS analytical method includes a matrix matching procedure that allows the quantification and correction of the trace impurities added to the samples during the Fe/Pd preparation. This approach is comparable to the reagent corrected data previously reported and flagged as "b" data qualifier to the ICP-MS data. No flags are required for this data set.

The TSS samples were analyzed following SM2540Dmod using a gravimetric analysis. The modification occurs in the use of a polycarbonate filter versus a glass fiber filter. A comparison between the glass fiber filters (GF/C) and the polycarbonate was conducted on AMB10 and AMB11. In almost all cases the GF/C filters over estimated the TSS concentration. The SOP has been modified to reflect the changes in the type of filter used for isolation of the TSS. No other changes were made to the standard method protocol. The data are reported in units of mg/L.

The OSAL samples were measured using a YSI-30 S-C-T probe. The data are reported in practical salinity units (PSU). The TOC and DOC samples were analyzed using a High Temperature Catalytic Oxidation (HTCO) method. The instrument is specially equipped with high-salt sample combustion tube kit and halogen scrubber for seawater analysis. Seawater samples were acidified to pH <2 by concentrated hydrochloric acid (trace metal grade, Fisher Chemical) prior to analysis then sparged for 2 minutes to remove inorganic carbon (IC). The non-purgeable organic carbons (NPOC) in samples were further converted to CO_2 by oxidation at 680°C with a platinum catalyst. A non-dispersive infrared detector (NDIR) was used to detect the converted CO_2 for quantification of NPOC. The data are reported as both mg/L and µM.

HOLDING TIMES: All samples were analyzed within the established holding times of 90 days for Hg, six months for all other metals, and 7 days between collection and filtration for TSS.

DETECTION LIMITS: Laboratory method detection limits (MDLs) for seawater are reported from the Annually Verified Seawater MDL Study as determined by seven replicates of Sequim Bay Seawater spiked at an appropriate concentration for each analyte. The freshwater MDL was reported from the Annually Verified Freshwater MDL Study determined using seven replicates of deionized water prepared using the TRM preparation. Reporting limits are determined as 3.18 times the laboratory achieved MDL. The data are evaluated and flagged as follows:

U Analyte not detected at or above the MDL, MDL reported
J Analyte detected above the MDL, but less than the RL
N Spiked sample recovery outside QC criterion of 70-130%
& Accuracy result outside QC criterion of ≤20% PD
* Precision result outside QC criterion of <30%

B Analyte detected in the method blank > RL and sample concentration < 10 times detected blank value
c Exceeds data quality objective but meets one of the following contingency criterion:
1 SRM certified <10x MDL or
2 Insufficient spiking level relative to native sample concentrations

METHOD BLANKS: A minimum of three method blanks were analyzed by each instrument with each analytical batch for metals. The average method blank for each batch was less than the RL for all metals.

The method blank for TSS is a polycarbonate filter (Nucleopore) taken through the analytical process with each batch of samples. The blanks were all less than the MDL.

The method blanks for TOC and DOC were deionized water and all below the RL. In addition, low carbon water (LCW) purchased from University of Miami was analyzed as part of the HTCO calibration curve to demonstrate that the instrumentation was not contributing carbon.

LABORATORY CONTROL SAMPLES: A minimum of one LCS (OPR or blank spike) was prepared and analyzed with each analytical batch of 20 or fewer samples for metals. Percent recoveries for LCS samples were within the QC acceptance criterion of 70% to 130% for all metals. The LCS matrix for the seawater samples was Sequim Bay Seawater prepared as both spiked and unspiked samples (e.g. SB LCS and SB Blank, respectively).

MATRIX SPIKE ACCURACY: A minimum of one set of duplicate matrix spikes (MS/MSD) was prepared and analyzed with each analytical batch of 20 or fewer samples for metals. Percent recoveries for matrix spikes were within the QC limits of 70% to 130% for all metals spiked at an appropriate level relative to the native sample concentration. Sample 3106-1715 from OF018 contained high native sample concentration for Zn and was not spiked at a sufficient level. The data are not qualified as they meet the contingency criteria for the unsufficient spiking level (see “c” flag). One matrix spike failed for Cu and Ni. The data were flagged. The alternate LCS and MS/MSD samples demonstrated acceptable accuracy and precision for these metals in this seawater matrix. No additional actions were required.

REPLICATE PRECISION: Laboratory precision was expressed as the relative percent difference (RPD) between laboratory duplicates. The RPD values for the laboratory duplicates were within the QC acceptance criterion of ±30% for all parameters detected above the RL.

STANDARD REFERENCE MATERIAL ACCURACY: Standard reference materials (SRM) were prepared and analyzed with each analytical batch at a minimum frequency of 1 per 20 or fewer samples. Analytical accuracy was expressed as the percent difference (PD) between the measured and the certified value. The SRM for Hg was 1641d, a freshwater SRM, as no seawater SRM was available. The PDs were within the QC acceptance criterion of ≤ 20%.

Two SRMs were analyzed with the analytical batches for Al, Cd, Cr, Cu, Ni, Pb, and Zn quantified by ICP-MS. The freshwater SRM 1640a demonstrated analytical accuracy for each batch analyzed by ICP-MS and the freshwater sample matrices (e.g. outfall 021). Percent recoveries were within the QC acceptance criterion except one replicate for Al. Alternate replicates and standards demonstrate acceptable accuracy for Al. No further action was required.

CASS-5 is a seawater SRM analyzed with each ICP-MS batch. There is no seawater SRM for Al. High purity standards and the freshwater SRM were used to evaluate analytical accuracy. The SRM is considered for data set evaluation only if it is not

certified greater than 10 times the MDL. The CASS-5 certified values for Cd, Cr, Ni, Pb, and Zn are certified values less than 10 times the MDL. The results are flagged with a “c” and considered for data set evaluation only and not for QC certification. The PDs were within the QC criterion for all metals except two replicates for Cr and all replicates for Pb. The alternate SRM, seawater LCS and high purity standards provide acceptable QC confirmation for the metals.

A salinity standard was used to verify the accuracy of the salinity measurements. The accuracy range was 0.0-1.1% PD for all salinity measurements.

There are no SRMs available for TOC or DOC. University of Miami provides a laboratory consensus value for DOC in estuarine water http://yyy.rsmas.miami.edu/groups/biogeochem/CRM.html The average of the reference value range was used to calculate the PD for each replicate. The PDs ranged from 1.7 to 12.6%.

ALS ENVIRONMENTAL

Client:	Battelle Marine Sciences Lab	**Service Request No.:**	K1510393
Project:	ENVVEST (AMB19)	**Date Received:**	09/18/15
Sample Matrix:	Ocean Water		

Case Narrative

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV validation deliverables including summary forms and all of the associated raw data for each of the analyses. When appropriate to the method, method blank results have been reported with each analytical test.

Sample Receipt

Forty water samples were received for analysis at ALS Environmental on 09/18/15. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4ºC upon receipt at the laboratory.

General Chemistry Parameters

Total Phosphorus by EPA Method 365.3:
The duplicate matrix spike recovery for sample AMB19-001/PS07 was outside control criteria because of suspected matrix interference. As a result of the interference, the results for this analyte contained a potential low bias. No further corrective action was taken.

No other anomalies associated with the analysis of these samples were observed.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

DAY1-AMB19

LOG-IN CHECKLIST

Reference SOP# MSL-A-001

Central File #: 31062 Sample No(s): 1671 - 1720 Batch: 51

Project Name: ENVVEST AMB 19 Project Manager: Brandenberger

TO BE COMPLETED BY PROJECT MANAGER (prior to arrival when possible)

Matrix: Water WP#

Yes	No	
☐	☐	Navy-type Project (requires high-level sample tracking procedures)
☐	☐	USDA Samples (see Compliance Agreement Checklist)

PM Verification:

☐	☐	Filter Samples:	*Amount:* Entire sample	Half of sample
☐	☐	Freeze dry sample(s) - samples will be weighed and placed in ultralow temp freezer (Login Lab)		
☐	☐	Special instructions:		

Sample Preservation Instructions:

See LIMS for archive/disposal information

TO BE COMPLETED UPON SAMPLE ARRIVAL/LOG-IN

Yes	No	N/A	Indicate in Appropriate Box	
☐	☐	☑	Custody seal present	Seal intact? YES NO
☑	☐	☐	Cooler temperature (acceptable range: 4±2°C or solids:frozen) (if multiple coolers, note temp. of each)	4 °C 4 °C
☐	☐	☑	Project Manager notified of any custody/login discrepancies (cooler temp, sponsor codes, etc) Comment/Remedy:	
☑	☐	☐	Were all chain of custody forms signed and dated?	
☑	☐	☐	Were samples filtered at MSL? DMC	

Sample condition(s): (Acceptable) Other (explain):

Container type: (Teflon) (Poly) (Glass) Cap. Vial Other:

Notes:

Completed By: STRICKLAND Date/Time: 20150915 1830

SAMPLE PRESERVATION

☐	Sample(s) were preserved prior to arrival at MSL (noted on CoC / Sample / per PM Instruction)		
☐	Random pH checked for ~10% of samples (use dip paper)	Sample IDs:	
☐	Complete pH check required for project (use pH meter and record on pH Record form)		
☑	Sample(s) were preserved at MSL		
Type: ☑	0.2% HNO3	Notes: Metals OPTIMA	Lot# 1214010
☐	0.5% HCl (Hg samples)	Notes:	Lot#
☒	Refrigerate/Freeze	Notes: TOC/DOC, TSS, OSAL, O&G, NUT	
☐	~~Other~~	Notes:	

Completed By: Date/Time: 9/17/15 1633

Storage Shelf: TOC/DOC - walk in Deep freezer, OSAL - walk in ref. oil & grease - walk in ref, Nutrients - walk in ref,

LOG-IN CHECKLIST

Reference SOP# MSL-A-001

Central File #: 31060 Sample No(s): 1721-1756 Batch: 52

Project Name: ENVVEST AMB19 Project Manager: Brandenberger

TO BE COMPLETED BY PROJECT MANAGER (prior to arrival when possible)

Matrix: SW WP#

Yes	No	
☑	☐	Navy-type Project (requires high-level sample tracking procedures)
☐	☐	USDA Samples (see Compliance Agreement Checklist)

PM Verification:

☐	☐	Filter Samples: *Amount:* Entire sample Half of sample
☐	☐	Freeze dry sample(s) - samples will be weighed and placed in ultralow temp freezer (Login Lab)
☐	☐	Special instructions:

Sample Preservation Instructions:

See LIMS for archive/disposal information

TO BE COMPLETED UPON SAMPLE ARRIVAL/LOG-IN

Yes	No	N/A	Indicate in Appropriate Box
☐	☐	☑	Custody seal present Seal intact? YES NO
☑	☐	☐	Cooler temperature (acceptable range: 4±2°C or solids:frozen) (if multiple coolers, note temp. of each) 4 °C 4 °C
☐	☐	☑	Project Manager notified of any custody/login discrepancies (cooler temp, sponsor codes, etc) Comment/Remedy:
☑	☐	☐	Were all chain of custody forms signed and dated?
☑	☐	☐	Were samples filtered at MSL? DMC

Sample condition(s): ~~Acceptable~~ Other (explain):

Container type: ~~Tetlon~~ ~~Poly~~ ~~Glass~~ Cap. Vial Other:

Notes:

Completed By: [signature] Date/Time: 20150916 1805

SAMPLE PRESERVATION

☐		Sample(s) were preserved prior to arrival at MSL (noted on CoC / Sample / per PM Instruction)	
☐		Random pH checked for ~10% of samples (use dip paper)	Sample IDs:
☐		Complete pH check required for project (use pH meter and record on pH Record form)	
☑		Sample(s) were preserved at MSL	
Type:	☑	0.2% HNO3	Notes: OPTIMA Lot# 124010
	☐	0.5% HCl (Hg samples)	Notes: Lot#
	☑	~~Refrigerate~~/~~Freeze~~	Notes: See notes ag
	☐	Other	Notes:

Completed By: [signature] Date/Time: 9/16/15 1000

Storage Shelf: TOC/DOC - Deep freeze.
TSS, Nutr. - walk in ref. MSL-5

☐	☐	Filter Samples:	Amount: Entire sample Half of sample
☐	☐	Freeze dry sample(s) - samples will be weighed and placed in ultralow temp freezer (Login Lab)	
☐	☐	Special instructions:	

Sample Preservation Instructions: _____

See LIMS for archive/disposal information

TO BE COMPLETED UPON SAMPLE ARRIVAL/LOG-IN

Yes	No	N/A	Indicate in Appropriate Box
☐	☐	☑	Custody seal present Seal intact? YES NO
☐	☐	☑	Cooler temperature (acceptable range: 4±2°C or solids:frozen) (if multiple coolers, note temp. of each)
☐	☐	☑	Project Manager notified of any custody/login discrepancies (cooler temp, sponsor codes, etc)
☑	☐	☐	Were all chain of custody forms signed and dated?
☐	☐	☑	Were samples filtered at MSL?

created in house as N/A °C °C

Comment/Remedy: _____

Sample condition(s): ~~Acceptable~~ ~~Other (explain):~~

Container type: Teflon Poly Glass Cap. Vial Other: _____

Notes: _____

Completed By: C. Soslow Date/Time: 9/4/15 1015

SAMPLE PRESERVATION

☐ Sample(s) were preserved prior to arrival at MSL (noted on CoC / Sample / per PM Instruction)

☐ Random pH checked for ~10% of samples (use dip paper) Sample IDs: _____

☐ Complete pH check required for project (use pH meter and record on pH Record form)

☐ Sample(s) were preserved at MSL

Type:			
☐	0.2% HNO3	Notes:	Lot#
☐	0.5% HCl (Hg samples)	Notes:	Lot#
☐	Refrigerate/Freeze	Notes:	
☑	Other	Notes:	to labs

Completed By: C. Soslow Date/Time: 9/4/15 1015

QA/QC NARRATIVE

PROJECT: Sinclair and Dyes Inlet Ambient Monitoring, March 2016 (AMB20)

PARAMETER: Total and Dissolved Metals – Al, Cd, Cr, Cu, Ni, Pb, Zn, Hg
Total Suspended Solids (TSS), Salinity (OSAL), Dissolved Organic Carbon (DOC), and Total Organic Carbon (TOC)

LABORATORY: Battelle Marine Sciences Laboratory (MSL), Sequim, Washington

MATRIX: Seawater and Freshwater

SAMPLE CUSTODY AND PROCESSING: Samples were collected from Sinclair and Dyes Inlet region by MSL and the U.S. Navy on 03/15/2016 and 03/16/2016. Samples were hand delivered to MSL by the field team. All samples were received in good condition. Samples were assigned a Battelle Central File (CF) identification number (3106) and were entered into Battelle's sample tracking system. Upon receipt at MSL, the samples designated for total and dissolved metals (TME/DME) were shaken vigorously and approximately 500mL was filtered through a pre-cleaned 0.45µm polyvinylidene fluoride (PVDF) filter membrane inside a class 100 clean bench and the filtrate was transferred to a trace metal clean Teflon bottle. The dissolved and total fractions were each acidified to a pH of < 2.0 with double distilled nitric acid. The samples for TSS and OSAL were stored at 4.0±2°C in low density polyethylene bottles prior to analysis. The samples for TOC and DOC were collected in pre-cleaned glass and stored at -20°C until analyses.

The following lists information on sample receipt and processing activities:

Sample Receipt Dates:	03/15/16 and 03/16/16 EQP BLKS 03/03/16
Cooler temp. on arrival	All coolers were at 4.0±2°C
Collection dates	See Table
TSS analysis dates	03/21/16
OSAL analysis dates	03/21/16
CVAF analysis dates (Hg)	03/22/16, 03/23/16, 03/28/16, 03/29/16, 03/30/16, and 04/12/16
TRM Prep/Freshwater Analysis by ICP-MS (Al, Cd, Cr, Cu, Ni, Pb, Zn)	04/25/16
Online Preconcentration Seawater Analysis by ICP-MS (Al, Cd, Cr, Cu, Ni, Pb, Zn)	04/01/16, 4/8/16, 4/11/16, 4/13/16, 4/14/16, and 4/20/16
TOC/DOC Analysis Date	4/5/16 through 4/12/16

QA/QC NARRATIVE

QA/QC DATA QUALITY OBJECTIVES FOR SEAWATER SAMPLES:

Mercury	CVAF	70-130%	≤20%	≤30%	0.1 ng/L	0.32 ng/L

METHODS:

Seawater samples were analyzed for eight metals: aluminum (Al), cadmium (Cd), chromium (Cr), copper (Cu), nickel (Ni), lead (Pb), zinc (Zn), and mercury (Hg). Samples were submitted for analyses by two methods. Both freshwater and seawater samples were analyzed for Hg by Cold Vapor Atomic Fluorescence (CVAF) in accordance with Battelle SOP *MSL-I-013*, *Total Mercury in Aqueous Samples by CVAF*, following EPA Method 1631 revision E. The Hg data are reported in ng/L.

Seawater samples were analyzed for Cr via direct injection at 15x dilution; Al was analyzed direct at a 10x dilution. All other metals were analyzed using a preconcentration via seaFast chelation step in accordance with Battelle SOP *MSL-I-022, Methods of Sample Preconcentration: Online Preconcentration for Trace Metals Analysis in Water.* Preconcentrated seawater samples were analyzed by Inductively Coupled Plasma-Mass Spectrometry (ICP-MS) in accordance with Battelle SOP *MSL-I-022, Determination of Elements in Aqueous and Digestate Samples by ICP/MS.* The base methods for this procedure are EPA Method 1638 and EPA Method 1640. The

QA/QC NARRATIVE

METHODS (cont): ICP-MS data were reported in units of µg/L

.

Freshwater samples identified as < 5% seawater were analyzed for all metals, except Hg, by ICP-MS following the preparation method for total recoverable metals (TRM) described in EPA Method 1640. The analysis for Hg does not require a different method for freshwater versus saltwater.

The ICP-MS data were reported in units of µg/L. The preconcentration procedure for seawater samples analyzed by ICP-MS for previous AMB events included the addition of chelating agents to induce precipitation of metals under specific conditions. Therefore the ICP-MS method included a matrix match step to correct for trace impurities of metals added during the preconcentration step. In previous AMB data sets, the mean reagent blank for each analytical batch was subtracted from the reported sample concentration after the analyses were completed and data were qualified with a "b". The new ICP-MS analytical method does not require this type of correction. No flags are required for this data set.

The TSS samples were analyzed following SM2540Dmod using a gravimetric analysis. The modification occurs in the use of a polycarbonate filter versus a glass fiber filter. A comparison between the glass fiber filters (GF/C) and the polycarbonate was conducted on AMB10 and AMB11. In almost all cases the GF/C filters over estimated the TSS concentration. The SOP has been modified to reflect the changes in the type of filter used for isolation of the TSS. No other changes were made to the standard method protocol. The data are reported in units of mg/L.

The OSAL samples were measured using a YSI-30 S-C-T probe. The data are reported in practical salinity units (PSU). The TOC and DOC samples were analyzed using a High Temperature Catalytic Oxidation (HTCO) method. The instrument is specially equipped with high-salt sample combustion tube kit and halogen scrubber for seawater analysis. Seawater samples were acidified to pH <2 by concentrated hydrochloric acid (trace metal grade, Fisher Chemical) prior to analysis then sparged for 2 minutes to remove inorganic carbon (IC). The non-purgeable organic carbons (NPOC) in samples were further converted to CO_2 by oxidation at 680°C with a platinum catalyst. A non-dispersive infrared detector (NDIR) was used to detect the converted CO_2 for quantification of NPOC. The data are reported as both mg/L and µM.

HOLDING TIMES: All samples were analyzed within the established holding times of 90 days for Hg, six months for all other metals, and 7 days between collection and filtration for TSS.

DETECTION LIMITS: Laboratory method detection limits (MDLs) for seawater are reported from the Annually Verified Seawater MDL Study as determined by seven replicates of Sequim Bay Seawater spiked at an appropriate concentration for each analyte. The freshwater MDL was reported from the Annually Verified Freshwater MDL Study determined using seven replicates of deionized water prepared using the TRM preparation. Reporting limits are determined as 3.18 times the laboratory achieved MDL. The data are evaluated and flagged as follows:

U Analyte not detected at or above the MDL, MDL reported
J Analyte detected above the MDL, but less than the RL
N Spiked sample recovery outside QC criterion of 70-130%
& Accuracy result outside QC criterion of ≤20% PD
* Precision result outside QC criterion of <30%
B Analyte detected in the method blank > RL and sample concentration < 10 times detected blank value
c Exceeds data quality objective but meets one of the following contingency criterion:

1 SRM certified <10x MDL or
2 Insufficient spiking level relative to native sample concentrations

METHOD BLANKS: A minimum of three method blanks were analyzed by each instrument with each analytical batch for metals. The average method blank for each batch was less than the RL for all metals.

A triplicate analysis of 0.45µm PVDF dissolved trace metals filters was performed following a 5% HNO_3 cleaning. The initial blank showed some Ni and Cu was leached into the DI water check. A subsequent re-test of 8 filter blanks showed non-detect values for these analytes, pointing to analytical error in the original filter blanks, and not a problem with metals leaching from the filtration units. Two of the 8 re-tests were performed on filters from the original blank screening. The data is appended to the report.

The method blank for TSS is a polycarbonate filter (Nucleopore) taken through the analytical process with each batch of samples. The blanks were all less than the MDL.

The method blanks for TOC and DOC were deionized water and all below the RL. In addition, low carbon water (LCW) purchased from University of Miami was analyzed as part of the HTCO calibration curve to demonstrate that the instrumentation was not contributing carbon.

LABORATORY CONTROL SAMPLES: A minimum of one LCS (OPR or blank spike) was prepared and analyzed with each analytical batch of 20 or fewer samples for metals. Percent recoveries for LCS samples were within the QC acceptance criterion of 70% to 130% for all metals. The LCS matrix for the seawater samples was Sequim Bay Seawater prepared as both spiked and unspiked samples (e.g. SB LCS and SB Blank, respectively).

MATRIX SPIKE ACCURACY: A minimum of one set of duplicate matrix spikes (MS/MSD) was prepared and analyzed with each analytical batch of 20 or fewer samples for metals. Percent recoveries for matrix spikes were within the QC limits of 70% to 130% for all metals spiked at an appropriate level relative to the native sample concentration. Sample 3106-1767 from M4 Total contained high native sample concentration for Al and was not spiked at a sufficient level. The data are not qualified as they meet the contingency criteria for the unsufficient spiking level (see “c” flag).

REPLICATE PRECISION: Laboratory precision was expressed as the relative percent difference (RPD) between laboratory duplicates. The RPD values for the laboratory duplicates were within the QC acceptance criterion of ±30% for all parameters detected above the RL.

STANDARD REFERENCE MATERIAL ACCURACY: Standard reference materials (SRM) were prepared and analyzed with each analytical batch at a minimum frequency of 1 per 20 or fewer samples. Analytical accuracy was expressed as the percent difference (PD) between the measured and the certified value. The SRM for Hg was 1641d, a freshwater SRM, as no seawater SRM was available. The PDs were within the QC acceptance criterion of ≤ 20%.

Two SRMs were analyzed with the analytical batches for Al, Cd, Cr, Cu, Ni, Pb, and Zn quantified by ICP-MS. The freshwater SRM 1640a demonstrated analytical accuracy for each batch analyzed by ICP-MS and the freshwater sample matrices (e.g. OF 021). Percent recoveries were within the QC acceptance criterion.

CASS-5 is a seawater SRM analyzed with each ICP-MS batch. There is no seawater SRM for Al. High purity standards and the freshwater SRM were used to evaluate analytical accuracy. The SRM is considered for data set evaluation only if it is not certified greater than 10 times the MDL. The CASS-5 certified values for Cd, Cr, Ni,

Pb, and Zn are certified values less than 10 times the MDL. The PDs were within the QC criterion for all metals except one replicates for Cr (21%). The result was flagged; no additional corrective action taken.

A salinity standard was used to verify the accuracy of the salinity measurements. The accuracy range was 0.0-0.4% PD for all salinity measurements.

There are no SRMs available for TOC or DOC. University of Miami provides a laboratory consensus value for DOC in estuarine water http://yyy.rsmas.miami.edu/groups/biogeochem/CRM.html The average of the reference value range was used to calculate the PD for each replicate. The PDs ranged from 2.0 to 14.7%.

ALS ENVIRONMENTAL

Client:	Battelle Marine Sciences Lab	**Service Request No.:**	K1602766
Project:	March 2016 Ambient Monitoring (AMB20)	**Date Received:**	03/18/16
Sample Matrix:	Ocean Water		

Case Narrative

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV validation deliverables including summary forms and all of the associated raw data for each of the analyses. When appropriate to the method, method blank results have been reported with each analytical test.

Sample Receipt

Forty-seven ocean water samples were received for analysis at ALS Environmental on 03/18/16. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4ºC upon receipt at the laboratory.

General Chemistry Parameters

No anomalies associated with the analysis of these samples were observed.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

LOG-IN CHECKLIST

Reference SOP# MSL-A-001

Central File #: 3106 Sample No(s): 1765 - 1820 Batch: 55

Project Name: ENVVEST AMB 20 DAY 1 Project Manager: Brandenburger

TO BE COMPLETED BY PROJECT MANAGER (prior to arrival when possible)

Matrix: Seawater WP# NG2253

Special Instructions:

See LIMS Sample Tracking for archive/disposal information

TO BE COMPLETED UPON SAMPLE ARRIVAL/LOG-IN

Yes	No	N/A	Indicate in Appropriate Box
		X	Custody seal present Seal intact? YES NO
X			Cooler temperature (acceptable range: less than 6°C or solids:frozen) (if multiple coolers, note temp. of each cooler)
		X	Project Manager notified of any custody/login discrepancies (cooler temp, sponsor codes, etc)
X			Were all chain of custody forms signed and dated?
X			Were samples filtered at MSL? ALL (HALF) DMS *Samples must be filtered prior to preservation!*

Cooler 1: 4 °C
Cooler 2: 4 °C
Cooler 3: 4 °C
Cooler 4: 4 °C

Comment/Remedy:

Sample condition(s): (Acceptable) Other (explain):

Container type: (Teflon) (Poly) (Glass) Cap. Vial Baggie Other:

Notes:

Completed By: STREVENS Cooler Receipt Date/Time: 20120815 1930

SAMPLE PRESERVATION

- [ ] Sample(s) were preserved prior to arrival at MSL (noted on: CoC / Sample / per PM Instruction)
- [ ] Random pH checked for ~10% of samples (use dip paper) Sample IDs:
- [ ] Complete pH check required for project (use pH meter and record on pH Record form)
- [X] Sample(s) were preserved at MSL

Type:
- [X] 0.2% HNO3 Notes: TMS, DMS Lot# 121610
- [ ] 0.5% HCl (Hg samples) Notes: Lot#
- [X] Refrigerate/Freeze Notes: TSS, Nutrient → refrigerator, Toc/DOC → -80°C
- [ ] Other Notes:

Completed By: STREVENS Preservation Date/Time: 20120315 1930

Storage Shelf: Toc/DOC = MSL5C, TSS/Nutrients = MSL45C, TMS =

Comments/Observations: Mats: 1765-1784 K-3-B 1819-1820 K-2-C

LOG-IN CHECKLIST

Reference SOP# MSL-A-001

Central File #: 3106 Sample No(s): 1760 - 1762 Batch: 54

Project Name: AMB20 Project Manager: JM/JS

TO BE COMPLETED BY PROJECT MANAGER (prior to arrival when possible)

Matrix: WATER WP#

Special Instructions:

See LIMS Sample Tracking for archive/disposal information

TO BE COMPLETED UPON SAMPLE ARRIVAL/LOG-IN

Yes	No	N/A	Indicate in Appropriate Box
☐	☐	☒	Custody seal present Seal intact? YES NO
☐	☐	☒	Cooler temperature (acceptable range: less than 6°C or solids:frozen) (if multiple coolers, note temp. of each cooler)
☐	☐	☒	Project Manager notified of any custody/login discrepancies (cooler temp, sponsor codes, etc)

Cooler 1: °C
Cooler 2: °C
Cooler 3: °C
Cooler 4: °C

Comment/Remedy:

☒	☐	☐	Were all chain of custody forms signed and dated?
☒	☐	☐	Were samples filtered at MSL? (ALL) HALF

Samples must be filtered prior to preservation!

Sample condition(s): (Acceptable) Other (explain):

Container type: (Teflon) Poly Glass Cap. Vial Baggie Other:

Notes:

Completed By: NICK SCHLAFER Cooler Receipt Date/Time: 20160303 10:30

SAMPLE PRESERVATION

☐ Sample(s) were preserved prior to arrival at MSL (noted on: CoC / Sample / per PM Instruction)

☐ Random pH checked for ~10% of samples (use dip paper) Sample IDs:

☐ Complete pH check required for project (use pH meter and record on pH Record form)

☒ Sample(s) were preserved at MSL

Type:		Notes:	Lot#
☒	0.2% HNO3	DME	1214010
☐	0.5% HCl (Hg samples)		
☐	Refrigerate/Freeze		
☐	Other		

Completed By: NICK SCHLAFER Preservation Date/Time: 20160303 10:30

Storage Shelf: MSL 5 271 K3A

QA/QC NARRATIVE

PROJECT: Sinclair and Dyes Inlet Ambient Monitoring, August 2016 (AMB21)

PARAMETER: Total and Dissolved Metals – Al (total only), Cd, Cr, Cu, Ni, Pb, Zn, Hg
Total Suspended Solids (TSS), Salinity (OSAL), Dissolved Organic Carbon (DOC), and Total Organic Carbon (TOC)

LABORATORY: Battelle Marine Sciences Laboratory (MSL), Sequim, Washington

MATRIX: Seawater and Freshwater

SAMPLE CUSTODY AND PROCESSING: Samples were collected from Sinclair and Dyes Inlet region by MSL and the U.S. Navy on 08/30/2016 and 08/31/2016. Samples were hand delivered to MSL by the field team. All samples were received in good condition. Samples were assigned a Battelle Central File (CF) identification number (3106) and were entered into Battelle's sample tracking system. Upon receipt at MSL, the samples designated for total and dissolved metals (TME/DME) were shaken vigorously and approximately 500mL was filtered through a pre-cleaned 0.45µm polyvinylidene fluoride (PVDF) filter membrane inside a class 100 clean bench and the filtrate was transferred to a trace metal clean Teflon bottle. The dissolved and total fractions were each acidified to a pH of < 2.0 with double distilled nitric acid. The samples for TSS and OSAL were stored at 4.0±2°C in low density polyethylene bottles prior to analysis. The samples for TOC and DOC were collected in pre-cleaned glass and stored at -20°C until analyses.

The following lists information on sample receipt and processing activities:

Sample Receipt Dates:	08/30/16 and 08/31/16 EQP BLKS 08/10/16 and 08/26/16
Cooler temp. on arrival	All coolers were at 4.0±2°C
Collection dates	See Table
TSS analysis dates	09/01/16 and 09/02/16
OSAL analysis dates	09/01/16 and 09/02/16
CVAF analysis dates (Hg)	09/02/16 - 09/12/16
TRM Prep/Freshwater Analysis by ICP-MS (Al, Cd, Cr, Cu, Ni, Pb, Zn)	09/09/16 – 09/15/16
Online Preconcentration Seawater Analysis by ICP-MS (Al, Cd, Cr, Cu, Ni, Pb, Zn)	09/09/16 – 09/15/16
TOC/DOC Analysis Date	09/08/16 – 09/14/16

METHODS:

Seawater samples were analyzed for eight metals: aluminum (Al), cadmium (Cd), chromium (Cr), copper (Cu), nickel (Ni), lead (Pb), zinc (Zn), and mercury (Hg). Samples were submitted for analyses by MSL methods. Both freshwater and seawater samples were analyzed for Hg by Cold Vapor Atomic Fluorescence (CVAF) in accordance with Battelle SOP *MSL-I-013*, *Total Mercury in Aqueous Samples by CVAF*, following EPA Method 1631 revision E. The Hg data are reported in ng/L.

Seawater samples were analyzed for Al and Cr via direct injection at 15x dilution. All other metals were analyzed using a preconcentration via seaFast chelation step in accordance with Battelle SOP *MSL-I-022, Methods of Sample Preconcentration: Online Preconcentration for Trace Metals Analysis in Water.* Seawater samples were analyzed by Inductively Coupled Plasma-Mass Spectrometry (ICP-MS) in accordance with Battelle SOP *MSL-I-022, Determination of Elements in Aqueous and Digestate Samples by ICP/MS.* The base methods for this procedure are EPA Method 1638 and EPA Method 1640. The ICP-MS data were reported in units of µg/L.

METHODS (cont): Freshwater samples identified as < 5% seawater were analyzed for all metals, except Hg, by ICP-MS following the preparation method for total recoverable metals (TRM) described in EPA Method 1640. The analysis for Hg does not require a different method for freshwater versus saltwater.

The preconcentration procedure for seawater samples analyzed by ICP-MS for events prior to AMB20 included the addition of chelating agents to induce precipitation of metals under specific conditions. Therefore the ICP-MS method included a matrix match step to correct for trace impurities of metals added during the preconcentration step. In previous AMB data sets, the mean reagent blank for each analytical batch was subtracted from the reported sample concentration after the analyses were completed and data were qualified with a "b". The new ICP-MS analytical method does not require this type of correction. No flags are required for this data set. This method shift has been documented in a manuscript entitled *Method Review for Trace Metals in Seawater: Automated Online Pre-concentration vs Borohydride Reductive Precipitation of Nearshore Seawater Samples for Analysis of Ni, Cu, Zn, Cd, and Pb via ICP-MS*, where events 17 and 19 were analyzed using both methods.

The TSS samples were analyzed following SM2540Dmod using a gravimetric analysis. The modification occurs in the use of a polycarbonate filter versus a glass fiber filter. A comparison between the glass fiber filters (GF/C) and the polycarbonate was conducted on AMB10 and AMB11. In almost all cases the GF/C filters over estimated the TSS concentration. The SOP has been modified to reflect the changes in the type of filter used for isolation of the TSS. No other changes were made to the standard method protocol. The data are reported in units of mg/L.

The OSAL samples were measured using a YSI-30 S-C-T probe. The data are reported in practical salinity units (PSU). The TOC and DOC samples were analyzed using a High Temperature Catalytic Oxidation (HTCO) method. The instrument is specially equipped with high-salt sample combustion tube kit and halogen scrubber for seawater analysis. Seawater samples were acidified to pH <2 by concentrated hydrochloric acid (trace metal grade, Fisher Chemical) prior to analysis then sparged for 2 minutes to remove inorganic carbon (IC). The non-purgeable organic carbons (NPOC) in samples were further converted to CO_2 by oxidation at 680°C with a platinum catalyst. A non-dispersive infrared detector (NDIR) was used to detect the converted CO_2 for quantification of NPOC. The data are reported as both mg/L and μM.

HOLDING TIMES: All samples were analyzed within the established holding times of 90 days for Hg, six months for all other metals, 28 days for OC, and 7 days between collection and filtration for TSS.

DETECTION LIMITS: Laboratory method detection limits (MDLs) for seawater are reported from the Annually Verified Seawater MDL Study as determined by seven replicates of Sequim Bay Seawater spiked at an appropriate concentration for each analyte. The freshwater MDL was reported from the Annually Verified Freshwater MDL Study determined using seven replicates of deionized water prepared using the TRM preparation. Reporting limits are determined as 3.18 times the laboratory achieved MDL. The data are evaluated and flagged as follows:

U Analyte not detected at or above the MDL, MDL reported
J Analyte detected above the MDL, but less than the RL
N Spiked sample recovery outside QC criterion of 70-130%
& Accuracy result outside QC criterion of ≤20% PD
* Precision result outside QC criterion of <30%
B Analyte detected in the method blank > RL and sample concentration < 10 times detected blank value

c Exceeds data quality objective but meets one of the following contingency criterion:
1 SRM certified <10x MDL or
2 Insufficient spiking level relative to native sample concentrations

METHOD BLANKS: A minimum of three method blanks were analyzed by each instrument with each analytical batch for metals. The average method blank for each batch was less than the RL for all metals.

A triplicate analysis of 0.45µm PVDF dissolved trace metals filters was performed following a 5% HNO_3 cleaning. One Pb value is J flagged at a level of 0.6ng/L. Al and Zn were both detected above their respective RL's for one sample. The Al detect was ≤2% of the lowest sample value. The Zn detect is in the range that its weight may effect OF021 fresh water values.

The method blank for TSS is a polycarbonate filter (Nucleopore) taken through the analytical process with each batch of samples. The blanks were all less than the MDL.

The method blanks for TOC and DOC were deionized water and all below the MDL. In addition, low carbon water (LCW) purchased from University of Miami was analyzed as part of the HTCO calibration curve to demonstrate that the instrumentation was not contributing carbon.

LABORATORY CONTROL SAMPLES: A minimum of one LCS (OPR or blank spike) was prepared and analyzed with each analytical batch of 20 or fewer samples for metals. Percent recoveries for LCS samples were within the QC acceptance criterion of 70% to 130% for all metals. The LCS matrix for the seawater samples was Sequim Bay Seawater prepared as both spiked and unspiked samples (e.g. SB LCS and SB Blank, respectively).

MATRIX SPIKE ACCURACY: A minimum of one set of duplicate matrix spikes (MS/MSD) was prepared and analyzed with each analytical batch of 20 or fewer samples for metals. Percent recoveries for matrix spikes were within the QC limits of 70% to 130% for all metals.

REPLICATE PRECISION: Laboratory precision was expressed as the relative percent difference (RPD) between laboratory duplicates. The RPD values for the laboratory duplicates were within the QC acceptance criterion of ±30% for all parameters detected above the RL.

STANDARD REFERENCE MATERIAL ACCURACY: Standard reference materials (SRM) were prepared and analyzed with each analytical batch at a minimum frequency of 1 per 20 or fewer samples. Analytical accuracy was expressed as the percent difference (PD) between the measured and the certified value. The SRM for Hg was 1641d, a freshwater SRM, as no seawater SRM was available. The PDs were within the QC acceptance criterion of ≤ 20%.

Two SRMs were analyzed with the analytical batches for Al, Cd, Cr, Cu, Ni, Pb, and Zn quantified by ICP-MS. The freshwater SRM 1640a demonstrated analytical accuracy for each batch analyzed by ICP-MS and the freshwater sample matrices (e.g. OF 021). Percent recoveries were within the QC acceptance criterion.

CASS-5 is a seawater SRM analyzed with each ICP-MS batch. There is no seawater SRM for Al. High purity standards and the freshwater SRM were used to evaluate analytical accuracy. The SRM is considered for data set evaluation only if it is not certified greater than 10 times the MDL. The CASS-5 certified values for Cd, Cr, Ni, Pb, and Zn are certified values less than 10 times the MDL. The PDs were within the QC criterion for all metals.

A salinity standard was used to verify the accuracy of the salinity measurements. The

accuracy range was 0.1-0.3PD for all salinity measurements.

There are no SRMs available for TOC or DOC. University of Miami provides a laboratory consensus value for DOC in estuarine water http://yyy.rsmas.miami.edu/groups/biogeochem/CRM.html The average of the reference value range was used to calculate the PD for each replicate. The PDs ranged from 1 to 16%.

ALS ENVIRONMENTAL

Client:	Battelle Marine Sciences Lab	**Service Request No.:**	K1610284
Project:	ENVVEST (AMB21)/ August 2016	**Date Received:**	09/02/16
Sample Matrix:	Ocean Water, Fresh Water		

Case Narrative

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV validation deliverables including summary forms and all of the associated raw data for each of the analyses. When appropriate to the method, method blank results have been reported with each analytical test.

Sample Receipt

Forty-seven samples were received for analysis at ALS Environmental on 09/02/16. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4ºC upon receipt at the laboratory.

General Chemistry Parameters

No anomalies associated with the analysis of these samples were observed.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Duplicate Matrix Spike Summary
Phosphorus, Total

Sample Name:	AMB21-023/PS16	**Units:**	mg/L
Lab Code:	K1610284-022	**Basis:**	NA
Analysis Method:	365.3		
Prep Method:	Method		

		Matrix Spike			Duplicate Matrix Spike					
		K1610284-022MS			K1610284-022DMS					
Analyte Name	**Sample Result**	**Result**	**Spike Amount**	**% Rec**	**Result**	**Spike Amount**	**% Rec**	**% Rec Limits**	**RPD**	**RPD Limit**
Phosphorus, Total	0.065	0.457	0.500	78	0.409	0.500	69	60-135	12	20

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

LOG-IN CHECKLIST

Reference SOP# MSL-A-001

Central File #: 3100 Sample No(s): 1870-1923 Batch: 59

Project Name: ENVVEST AMB21 Project Manager: Brandenberger

TO BE COMPLETED BY PROJECT MANAGER (prior to arrival when possible)

Matrix: Seawater / Freshwater WP# WG22541

Yes	No	
X		Navy-type Project (requires high-level sample tracking procedures)
	X	USDA Samples (see Compliance Agreement Checklist)

PM Verification:

X		Filter Samples: Amount: Entire sample Half of sample TMS
	X	Freeze dry sample(s) - samples will be weighed and placed in ultralow temp freezer (Login Lab)
	X	Special instructions:

Sample Preservation Instructions:

See LIMS for archive/disposal information

TO BE COMPLETED UPON SAMPLE ARRIVAL/LOG-IN

Yes	No	N/A	Indicate in Appropriate Box
		X	Custody seal present Seal intact? YES NO
X			Cooler temperature (acceptable range: 4±2°C or solids:frozen) 4° °C
			(if multiple coolers, note temp. of each) 4 °C
		X	Project Manager notified of any custody/login discrepancies (cooler temp, sponsor codes, etc)
			Comment/Remedy:
X			Were all chain of custody forms signed and dated?
X			Were samples filtered at MSL? DME

Sample condition(s): Acceptable Other (explain):

Container type: Teflon Poly Glass Cap. Vial Other:

Notes:

Completed By: STRUCK Date/Time: 2/10/08 1830

SAMPLE PRESERVATION

		Sample(s) were preserved prior to arrival at MSL (noted on CoC / Sample / per PM Instruction)	
		Random pH checked for ~10% of samples (use dip paper)	Sample IDs:
		Complete pH check required for project (use pH meter and record on pH Record form)	
		Sample(s) were preserved at MSL	
Type:	X	0.2% HNO3	Notes: TME / DME Lot# 1214050
		0.5% HCl (Hg samples)	Notes: Lot#
	X	Refrigerate/Freeze	Notes: R: TSS/Nut/oil F: TOC/DOC
		Other	Notes:

Completed By: STRUCK Date/Time: 2/10/08 1830

Storage Shelf: DME - K5B • K5D, TME - K6A • K6B

LOG-IN CHECKLIST

Reference SOP# MSL-A-001

Central File #: 31062 Sample No(s): PA24 - 1965 Batch: 60

Project Name: ENVVEST AMB21 Project Manager: Brandenburger

TO BE COMPLETED BY PROJECT MANAGER (prior to arrival when possible)

Matrix: Seawater WP#

Yes	No	
X		Navy-type Project (requires high-level sample tracking procedures)
	X	USDA Samples (see Compliance Agreement Checklist)

PM Verification:

X		Filter Samples: Amount: Entire sample Half of sample true to DMS
	X	Freeze dry sample(s) - samples will be weighed and placed in ultralow temp freezer (Login Lab)
	X	Special instructions:

Sample Preservation Instructions:

See LIMS for archive/disposal information

TO BE COMPLETED UPON SAMPLE ARRIVAL/LOG-IN

Yes	No	N/A	Indicate in Appropriate Box
		X	Custody seal present Seal intact? YES NO
X			Cooler temperature (acceptable range: 4±2°C or solids:frozen) (if multiple coolers, note temp. of each) 4 °C, 4 °C
		X	Project Manager notified of any custody/login discrepancies (cooler temp, sponsor codes, etc) Comment/Remedy:
X			Were all chain of custody forms signed and dated?
X			Were samples filtered at MSL? TMS

Sample condition(s): Acceptable Other (explain):

Container type: Teflon Poly Glass Cap. Vial Other:

Notes:

Completed By: STRUSS Date/Time: 20160831 1730

SAMPLE PRESERVATION

	Sample(s) were preserved prior to arrival at MSL (noted on CoC / Sample / per PM Instruction)
	Random pH checked for ~10% of samples (use dip paper) Sample IDs:
	Complete pH check required for project (use pH meter and record on pH Record form)
X	Sample(s) were preserved at MSL

Type:			
X	0.2% HNO3	Notes: TMS, DMS	Lot# 121455
	0.5% HCl (Hg samples)	Notes:	Lot#
X	Refrigerate/Freeze	Notes: R: TSS, Nuts F: Toc/Doc (-20c)	
	Other	Notes:	

Completed By: STRUSS Date/Time: 20160831 1730

Cooler Receipt and Preservation Form

Client Battelle Service Request K16 10284

Received: 9-2-16 Opened: 9-2-16 By: ES Unloaded: 9-2-16 By: ES

1. Samples were received via? *USPS* (*Fed Ex*) *UPS* *DHL* *PDX* *Courier* *Hand Delivered*
2. Samples were received in: (circle) (*Cooler*) *Box* *Envelope* *Other* _____ *NA*
3. Were custody seals on coolers? NA (Y) N If yes, how many and where? 1-front
   If present, were custody seals intact? (Y) N If present, were they signed and dated? (Y) N

Raw Cooler Temp	Corrected Cooler Temp	Raw Temp Blank	Corrected Temp Blank	Corr. Factor	Thermometer ID	Cooler/COC ID (NA)	Tracking Number NA	Filed
-0.1	-0.3	1.3	1.1	-0.2	361		6447 9277 7223	
4.9	4.6	6.1	5.8	-0.3	328		7271 3910 43[illegible]	
4.2	4.2	5.0	5.0	0	360		7771 3910 4652	

4. Packing material: (*Inserts*) *Baggies* (*Bubble Wrap*) (*Gel Packs*) *Wet Ice* *Dry Ice* *Sleeves* _____
5. Were custody papers properly filled out (ink, signed, etc.)? NA (Y) N
6. Were samples received in good condition (temperature, unbroken)? *Indicate in the table below.* NA (Y) N
   If applicable, tissue samples were received: *Frozen* *Partially Thawed* *Thawed*
7. Were all sample labels complete (i.e analysis, preservation, etc.)? NA (Y) N
8. Did all sample labels and tags agree with custody papers? *Indicate major discrepancies in the table on page 2.* NA (Y) N
9. Were appropriate bottles/containers and volumes received for the tests indicated? NA (Y) N
10. Were the pH-preserved bottles (*see SMO GEN SOP*) received at the appropriate pH? *Indicate in the table below* NA (Y) N
11. Were VOA vials received without headspace? *Indicate in the table below.* (NA) Y N
12. Was C12/Res negative? (NA) Y N

Data Qualifiers
Ambient Monitoring - AMB22
ENVVEST December 2016

DATA QUALIFIERS:

c	Exceeds DQO but meets contingency criteria of either:
1	SRM certified <10x MDL
2	Insufficient spiking level relative to native sample concentrations
U	Analyte not detected at or above the MDL, MDL reported
J	Analyte detected above the MDL, but less than the RL
--	Not analyzed
NA	Not applicable/available
N	Spiked sample recovery outside QC criterion of 70-130%
NC	Not Certified
&	Accuracy result outside QC criterion of ≤20% PD
*	Precision result outside QC criterion of <30%
NS	Sample not spiked for this analyte
B	Analyte detected in the method blank > RL
	and sample concentration < 10 times detected blank value
b	Data are blank corrected using the batch specific procedural blank
[1]	Reported from the nucleopore filtration method instead of GF/C filters
[2]	Seawater DOC CRM (LOT#03-12) and low carbon water (LCW) were purchased from University of Miami http://yyy.rsmas.miami.edu/groups/biogeochem/CRM.html
[3]	Sample bottle cracked, no data reported
[4]	The laboratory DI water was found to be elevated in OC. The samples were not impacted by the DI water issue. See the QC narrative for more discussion.
HTCO	High Temperature Catalytic Oxidation

PROJECT: Sinclair and Dyes Inlet Ambient Monitoring, December 2016 (AMB22)

PARAMETER: Total and Dissolved Metals – Al (total only), Cd, Cr, Cu, Ni, Pb, Zn, Hg
Total Suspended Solids (TSS), Salinity (OSAL), Dissolved Organic Carbon (DOC), and Total Organic Carbon (TOC)

LABORATORY: Battelle Marine Sciences Laboratory (MSL), Sequim, Washington

MATRIX: Seawater and Freshwater

SAMPLE CUSTODY AND PROCESSING: Samples were collected from Sinclair and Dyes Inlet region by MSL and the U.S. Navy on 12/06/2016 and 12/07/2016. Samples were hand delivered to MSL by the field team. All samples were received in good condition. Samples were assigned a Battelle Central File (CF) identification number (3106) and were entered into Battelle's sample tracking system. Upon receipt at MSL, the samples designated for total and dissolved metals (TME/DME) were shaken vigorously and approximately 500mL was filtered through a pre-cleaned 0.45µm polyvinylidene fluoride (PVDF) filter membrane inside a class 100 clean bench and the filtrate was transferred to a trace metal clean Teflon bottle. The dissolved and total fractions were each acidified to a pH of < 2.0 with double distilled nitric acid. The samples for TSS and OSAL were stored at 4.0±2°C in low density polyethylene bottles prior to analysis. The samples for TOC and DOC were collected in pre-cleaned glass and stored at -20°C until analyses.

The following lists information on sample receipt and processing activities:

Sample Receipt Dates:	12/06/16 and 12/07/16 EQP BLKS 11/18/16
Cooler temp. on arrival	All coolers were at 4.0±2°C
Collection dates	See Table
TSS analysis dates	12/08/16 and 12/13/16
OSAL analysis dates	12/08/16 and 12/13/16
CVAF analysis dates (Hg)	12/09/16 - 12/20/16
TRM Prep/Freshwater Analysis by ICP-MS (Al, Cd, Cr, Cu, Ni, Pb, Zn)	12/19/16 – 12/20/16
Online Preconcentration/Direct Seawater Analysis by ICP-MS (Al, Cd, Cr, Cu, Ni, Pb, Zn)	12/21/16 – 02/22/17
TOC/DOC Analysis Date	12/14/16 – 12/21/16

QA/QC DATA QUALITY OBJECTIVES FOR SEAWATER SAMPLES:

Mercury	CVAF	70-130%	≤20%	≤30%	0.10 ng/L	0.32 ng/L

METHODS:

Freshwater and seawater samples were analyzed for eight metals: aluminum (Al), cadmium (Cd), chromium (Cr), copper (Cu), nickel (Ni), lead (Pb), zinc (Zn), and mercury (Hg). Samples were submitted for analyses by MSL methods.

Both freshwater and seawater samples were analyzed for Hg by Cold Vapor Atomic Fluorescence (CVAF) in accordance with Battelle SOP *MSL-I-013, Total Mercury in Aqueous Samples by CVAF*, following EPA Method 1631 revision E. The Hg data are reported in ng/L.

Seawater samples were analyzed for Al and Cr via direct injection at 15x dilution. All other metals were analyzed using a preconcentration via seaFast chelation step in accordance with Battelle SOP *MSL-I-022, Methods of Sample Preconcentration: Online Preconcentration for Trace Metals Analysis in Water*. Seawater samples were analyzed by Inductively Coupled Plasma-Mass Spectrometry (ICP-MS) in accordance with Battelle SOP *MSL-I-022, Determination of Elements in Aqueous and Digestate*

METHODS (cont): *Samples by ICP/MS*. The base methods for this procedure are EPA Method 1638 and EPA Method 1640. The ICP-MS data were reported in units of µg/L. Freshwater samples identified as <5% seawater were analyzed for all metals, except Hg, by ICP-MS following the preparation method for total recoverable metals (TRM) described in EPA Method 1640. The analysis for Hg does not require a different method for freshwater versus saltwater.

The preconcentration procedure for seawater samples analyzed by ICP-MS for events prior to AMB20 included the addition of chelating agents to induce precipitation of metals under specific conditions. Therefore the ICP-MS method included a matrix match step to correct for trace impurities of metals added during the preconcentration step. In previous AMB data sets, the mean reagent blank for each analytical batch was subtracted from the reported sample concentration after the analyses were completed and data were qualified with a "b". The new ICP-MS analytical method does not require this type of correction. No flags are required for this data set. This method shift has been documented in a manuscript entitled *Method Review for Trace Metals in Seawater: Automated Online Pre-concentration vs Borohydride Reductive Precipitation of Nearshore Seawater Samples for Analysis of Ni, Cu, Zn, Cd, and Pb via ICP-MS*, where events 17 and 19 were analyzed using both methods.

The TSS samples were analyzed following SM2540Dmod using a gravimetric analysis. A modification occurs in the use of a polycarbonate filter versus a glass fiber filter. A comparison between the glass fiber filters (GF/C) and the polycarbonate was conducted on AMB10 and AMB11 samples. In almost all cases the GF/C filters over estimated the TSS concentration. MSL SOP I-041-00 has been modified to reflect the changes in the type of filter used for isolation of the TSS. No other changes were made to the standard method protocol. The data are reported in units of mg/L.

The OSAL samples were measured using a YSI-30 S-C-T probe. The data are reported in practical salinity units (PSU). The TOC and DOC samples were analyzed using a High Temperature Catalytic Oxidation (HTCO) method. The instrument is specially equipped with high-salt sample combustion tube kit and halogen scrubber for seawater analysis. Seawater samples were acidified to pH <2 by concentrated hydrochloric acid (trace metal grade, Fisher Chemical) prior to analysis then sparged for 2 minutes to remove inorganic carbon (IC). The non-purgeable organic carbons (NPOC) in samples were further converted to CO_2 by oxidation at 680°C with a platinum catalyst. A non-dispersive infrared detector (NDIR) was used to detect the converted CO_2 for quantification of NPOC. The data are reported as both mg/L and µM.

HOLDING TIMES: All samples were analyzed within the established holding times of 90 days for Hg, six months for all other metals, 28 days for OC, and 7 days between collection and filtration for TSS.

DETECTION LIMITS: Laboratory method detection limits (MDLs) for seawater were reported from an Annually Verified Seawater MDL Study as determined by seven replicates of NASS Seawater. The freshwater MDL was reported from the Annually Verified Freshwater MDL Study determined using seven replicates of deionized water prepared using the TRM preparation. Reporting limits are determined as 3.18 times the laboratory achieved MDL. The data are evaluated and flagged as follows:

U Analyte not detected at or above the MDL, MDL reported
J Analyte detected above the MDL, but less than the RL
N Spiked sample recovery outside QC criterion of 70-130%
& Accuracy result outside QC criterion of ≤20% PD
* Precision result outside QC criterion of <30%
B Analyte detected in the method blank > RL and sample concentration < 10 times

DETECTION LIMITS (Continued):

detected blank value

c Exceeds data quality objective but meets one of the following contingency criterion:
  1 SRM certified <10x MDL or
  2 Insufficient spiking level relative to native sample concentrations

METHOD BLANKS:

A minimum of three method blanks were analyzed by each instrument with each analytical batch for metals. The average method blank for each batch was less than the RL for all metals.

A triplicate analysis of 0.45µm PVDF dissolved trace metals filters was performed following a 5% HNO_3 cleaning. Zn values are B flagged at a level of 0.0643-0.412µg/L. As a corrective action filter blank samples were re-analyzed to confirm Zn levels; additionally data regression was used to identify field data outliers, via x residuals comparing total and dissolved Zn values, resulting in re-analysis of AMB22-023 and AMB22-102 (statistical analysis is available upon request). Re-analysis confirmed the values on these samples to be <10% RPD with the exception of sample 3106-2049. Sample 2049 and other Zn dissolved values <1.20 µg/L can be used with caution. A third HNO_3 gravity filtration clean-up step will be added for future AMB PVDF.

The method blank for TSS is a polycarbonate filter (Nucleopore) taken through the analytical process with each batch of samples. The blanks were all less than the MDL.

The method blanks for TOC and DOC were deionized water and all below the MDL. In addition, low carbon water (LCW) purchased from University of Miami was analyzed as part of the HTCO calibration curve to demonstrate that the instrumentation was not contributing carbon.

LABORATORY CONTROL SAMPLES:

A minimum of one LCS (OPR or blank spike) was prepared and analyzed with each analytical batch of 20 or fewer samples for metals. Percent recoveries for LCS samples were within the QC acceptance criterion of 70% to 130% for all metals. The LCS matrix for the seawater samples was Sequim Bay Seawater prepared as both spiked and unspiked samples (e.g. SB LCS and SB Blank, respectively).

MATRIX SPIKE ACCURACY:

A minimum of one set of duplicate matrix spikes (MS/MSD) was prepared and analyzed with each analytical batch of 20 or fewer samples for metals. Percent recoveries for matrix spikes were within the QC limits of 70% to 130% for all metals spiked at sufficient levels relative to native sample concentrations.

REPLICATE PRECISION:

Laboratory precision was expressed as the relative percent difference (RPD) between laboratory duplicates. The RPD values for the laboratory duplicates were within the QC acceptance criterion of ±30% for all parameters detected above the RL. Analytical batch Q012417A had a programming error and only contained one duplicate analysis; additional dissolved metal duplicates were added into run Q022117A. Additional replicate precision for Q012417A is demonstrated by the RSDs of SB Blanks and RPDs of MS/MSDs. Batch Q122116A had a similar programming error; replicate precision is demonstrated by the RPDs of MS/MSDs.

STANDARD REFERENCE MATERIAL ACCURACY:

Standard reference materials (SRM) were prepared and analyzed with each analytical batch at a minimum frequency of 1 per 20 or fewer samples. Analytical accuracy was expressed as the percent difference (PD) between the measured and the certified value. The SRM for Hg was 1641d, a freshwater SRM, as no seawater SRM was available. The PDs were within the QC acceptance criterion of ≤ 20%.

CASS and NASS are a seawater SRM analyzed with each ICP-MS batch. There is no

STANDARD REFERENCE MATERIAL ACCURACY (Continued):

seawater SRM for Al. High purity standards and the freshwater SRM were used to evaluate analytical accuracy. The SRM is considered for data set evaluation only if it is not certified greater than 10 times the MDL. The PDs were within the QC criterion for all metals.

The seawater SRMs were analyzed with the analytical batches for Al, Cd, Cr, Cu, Ni, Pb, and Zn quantified by ICP-MS. The freshwater SRM 1640a demonstrated analytical accuracy for each batch analyzed by ICP-MS and the freshwater sample matrices (e.g. OF021). Percent recoveries were within the QC acceptance criterion. NASS was reported in place of CASS for Q010317A R3 due to a syringe alignment issue on the auto-sampler during that run. NASS is typically run as a backup SRM with each batch.

A salinity standard was used to verify the accuracy of the salinity measurements. The accuracy range was 0.3-1.7PD for all salinity measurements.

There are no SRMs available for TOC or DOC. University of Miami provides a laboratory consensus value for DOC in estuarine water http://yyy.rsmas.miami.edu/groups/biogeochem/CRM.html The average of the reference value range was used to calculate the PD for each replicate. The PDs ranged from 1 to 10%.

Sample Matrix:	Ocean Water		

Case Narrative

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV validation deliverables including summary forms and all of the associated raw data for each of the analyses. When appropriate to the method, method blank results have been reported with each analytical test.

Sample Receipt

Forty-seven ocean water samples were received for analysis at ALS Environmental on 12/09/16. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4ºC upon receipt at the laboratory.

General Chemistry Parameters

Ammonia as Nitrogen by Standard Method 4500-NH3 E:
The Relative Percent Difference (RPD) criterion for the replicate analysis in sample Batch QC was not applicable because the analyte concentration was not significantly greater than the Method Reporting Limit (MRL). Analytical values derived from measurements close to the detection limit are not subject to the same accuracy and precision criteria as results derived from measurements higher on the calibration range for the method.

No other anomalies associated with the analysis of these samples were observed.

Approved by_____

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Client: Battelle Marine Sciences Lab **Service Request:**K1614884
Project: ENVVEST December 2016/Ambient Monitoring (AMB22)

Continuing Calibration Blank (CCB) Summary

Ammonia as Nitrogen

Analysis Method: SM 4500-NH3 E **Units:**mg/L

LOG-IN CHECKLIST

Reference SOP# MSL-A-001

Central File #: 31060 Sample No(s): 1994-2045 Batch: 62

Project Name: ENVVEST AMB22 DEC 2010 Project Manager: Brandon Berger

TO BE COMPLETED BY PROJECT MANAGER (prior to arrival when possible)

Matrix: Seawater, cooling water WP# N01796

Special Instructions:

See LIMS Sample Tracking for archive/disposal information

TO BE COMPLETED UPON SAMPLE ARRIVAL/LOG-IN

Yes	No	N/A	Indicate in Appropriate Box	
☐	☐	☒	Custody seal present Seal intact? YES NO	Cooler 1: <4 °C
☒	☐	☐	Cooler temperature (acceptable range: less than 6°C or solids:frozen) (if multiple coolers, note temp. of each cooler)	Cooler 2: <4 °C Cooler 3: <4 °C Cooler 4: <4 °C
☐	☐	☒	Project Manager notified of any custody/login discrepancies (cooler temp, sponsor codes, etc) Comment/Remedy:	
☒	☐	☐	Were all chain of custody forms signed and dated?	
☒	☐	☐	Were samples filtered at MSL? ALL (HALF) DME	*Samples must be filtered prior to preservation!*

Sample condition(s): (Acceptable) Other (explain):

Container type: (Teflon) (Poly) (Glass) Cap. Vial Baggie Other:

Notes:

Completed By: STRICKLAND Cooler Receipt Date/Time: 20Dec10 1900

SAMPLE PRESERVATION

☐ Sample(s) were preserved prior to arrival at MSL (noted on: CoC / Sample / per PM Instruction)

☐ Random pH checked for ~10% of samples (use dip paper) Sample IDs:

☐ Complete pH check required for project (use pH meter and record on pH Record form)

☒ Sample(s) were preserved at MSL

Type: ☒	0.2% HNO3	Notes: TMS, DMS	Lot# 1214050
☐	0.5% HCl (Hg samples)	Notes:	Lot#
☒	Refrigerate/Freeze	Notes: Ref: Nutrients, TSS/Sal Freeze: TOC, DOC	
☐	Other	Notes:	

$ oil/grease

Notes:

AMB22 Outfall Compositing

OF018 (PW4)-Autosampler is still disconnected from the signal line, necessitating manual compositing.

20161205- Pumped down 6x in previous 24 hours. Two aliquots were taken this day, one at 1315 and one at 1816, each was 2.5L.

20161206- A third aliquot of 5L was added at 1020.

Additional notes: An additional 10L sample was collected by Ernie, 5L at 20161205 1816 and 5L at 20161206 1020. Corrosion of the stainless steel spigot was photographed by Rory. The new inline sampler should be running by next quarter.

OF019 (PW6)-The ISCO pump was setup by Dave Metallo with a Y in the tubing so that Ernie could collect an additional 10L sample; tubing was cleaned by SPAWAR. The electrician unable to correctly install the signal line, so the ISCO was started manually. Nick will flush the flow cell with DI water on 20161208 to eliminate any fouling until the next use.

20161205-Pump cycle number not indicated in Ernie's notes. 2.5L aliquots collected at 1623 and 1715.

20161206- 2 additional 2.5L aliquots collected at 1057 and 1151.

OF021 (steamplant)-After 4 unsuccessful attempts to start a pump program it was determined that the liquid sensor on the Sigma sampler was faulty, and was causing both rinse water to enter the collection vessel, and a large over injection of the aliquot (~2L instead of 100mL). Sigma was contacted by Rory, and a new sensor part has been ordered. Manual compositing was completed at this station.

20161205- One aliquot of 3.3L was added to the collection jar.

20161206-Two additional 3.3L aliquots were added, one at 0855 and one at 1312.

Data Qualifiers
Ambient Monitoring - AMB23
ENVVEST March 2017

DATA QUALIFIERS:

c	Exceeds DQO but meets contingency criteria of either:
1	SRM certified <10x MDL
2	Insufficient spiking level relative to native sample concentrations
U	Analyte not detected at or above the MDL, MDL reported
J	Analyte detected above the MDL, but less than the RL
--	Not analyzed
NA	Not applicable/available
N	Spiked sample recovery outside QC criterion of 70-130%
NC	Not Certified
&	Accuracy result outside QC criterion of ≤20% PD
*	Precision result outside QC criterion of <30%
NS	Sample not spiked for this analyte
B	Analyte detected in the method blank > RL
	and sample concentration < 10 times detected blank value
b	Data are blank corrected using the batch specific procedural blank
[1]	Reported from the nucleopore filtration method instead of GF/C filters
[2]	Seawater DOC CRM (LOT#03-12) and low carbon water (LCW) were purchased from University of Miami http://yyy.rsmas.miami.edu/groups/biogeochem/CRM.html
[3]	Sample bottle cracked, no data reported
[4]	The laboratory DI water was found to be elevated in OC. The samples were not impacted by the DI water issue. See the QC narrative for more discussion.
HTCO	High Temperature Catalytic Oxidation

PROJECT: Sinclair and Dyes Inlet Ambient Monitoring, March 2017 (AMB23)

PARAMETER: Total and Dissolved Metals – Al (total only), Cd, Cr, Cu, Ni, Pb, Zn, Hg
Total Suspended Solids (TSS), Salinity (OSAL), Dissolved Organic Carbon (DOC), and Total Organic Carbon (TOC)

LABORATORY: Battelle Marine Sciences Laboratory (MSL), Sequim, Washington

MATRIX: Seawater and Freshwater

SAMPLE CUSTODY AND PROCESSING: Samples were collected from Sinclair and Dyes Inlet region by MSL and the U.S. Navy on 03/28/2017, 03/29/2017 and 04/05/2017. Samples were hand delivered to MSL by the field team. All samples were received in good condition. Samples were assigned a Battelle Central File (CF) identification number (3106) and were entered into Battelle's sample tracking system. Upon receipt at MSL, the samples designated for total and dissolved metals (TME/DME) were shaken vigorously and approximately 500mL was filtered through a pre-cleaned 0.45µm polyvinylidene fluoride (PVDF) filter membrane inside a class 100 clean bench and the filtrate was transferred to a trace metal clean Teflon bottle. The dissolved and total fractions were each acidified to a pH of < 2.0 with double distilled nitric acid. The samples for TSS and OSAL were stored at 4.0±2°C in low density polyethylene bottles prior to analysis. The samples for TOC and DOC were collected in pre-cleaned glass and stored at -20°C until analyses.

The following lists information on sample receipt and processing activities:

Sample Receipt Dates:	03/28/2017, 03/29/2017 and 04/05/2017 EQP BLKS 03/21/17
Cooler temp. on arrival	All coolers were at <6.0°C
Collection dates	03/28/2017, 03/29/2017 and 04/05/2017
TSS analysis dates	04/01/17 and 04/11/17
OSAL analysis dates	04/01/17 and 04/11/17
CVAF analysis dates (Hg)	04/18/17 - 05/09/17
TRM Prep/Freshwater Analysis by ICP-MS (Al, Cd, Cr, Cu, Ni, Pb, Zn)	05/02/17 – 05/03/17
Online Preconcentration/Direct Seawater Analysis by ICP-MS (Al, Cd, Cr, Cu, Ni, Pb, Zn)	05/15/17 – 05/19/17
TOC/DOC Analysis Date	04/20/17 – 04/26/17

QA/QC DATA QUALITY OBJECTIVES FOR SEAWATER SAMPLES:

METHODS:

Freshwater and seawater samples were analyzed for eight metals: aluminum (Al), cadmium (Cd), chromium (Cr), copper (Cu), nickel (Ni), lead (Pb), zinc (Zn), and mercury (Hg). Samples were submitted for analyses by MSL methods.

Both freshwater and seawater samples were analyzed for Hg by Cold Vapor Atomic Fluorescence (CVAF) in accordance with Battelle SOP *MSL-I-013, Total Mercury in Aqueous Samples by CVAF*, following EPA Method 1631 revision E. The Hg data are reported in ng/L.

Seawater samples were analyzed for Al and Cr via direct injection at 15x dilution. All other metals were analyzed using a preconcentration via seaFast chelation step in accordance with Battelle SOP *MSL-I-022, Methods of Sample Preconcentration: Online Preconcentration for Trace Metals Analysis in Water*. Seawater samples were analyzed by Inductively Coupled Plasma-Mass Spectrometry (ICP-MS) in accordance with Battelle SOP *MSL-I-022, Determination of Elements in Aqueous and Digestate*

METHODS (cont): *Samples by ICP/MS*. The base methods for this procedure are EPA Method 1638 and EPA Method 1640. The ICP-MS data were reported in units of µg/L. Freshwater samples identified as <5% seawater were analyzed for all metals, other than Hg, by ICP-MS following the preparation method for total recoverable metals (TRM) described in EPA Method 1640. The analysis for Hg does not require a different method for freshwater versus saltwater.

The preconcentration procedure for seawater samples analyzed by ICP-MS for events prior to AMB20 included the addition of chelating agents to induce precipitation of metals under specific conditions. Therefore the ICP-MS method included a matrix match step to correct for trace impurities of metals added during the preconcentration step. In previous AMB data sets, the mean reagent blank for each analytical batch was subtracted from the reported sample concentration after the analyses were completed and data were qualified with a "b". The new ICP-MS analytical method does not require this type of correction. No flags are required for this data set. This method shift has been documented in a manuscript entitled *Method Review for Trace Metals in Seawater: Automated Online Pre-concentration vs Borohydride Reductive Precipitation of Nearshore Seawater Samples for Analysis of Ni, Cu, Zn, Cd, and Pb via ICP-MS*, where events 17 and 19 were analyzed using both methods.

The TSS samples were analyzed following SM2540Dmod using a gravimetric analysis. A modification occurs in the use of a polycarbonate filter versus a glass fiber filter. A comparison between the glass fiber filters (GF/C) and the polycarbonate was conducted on AMB10 and AMB11 samples. In almost all cases the GF/C filters over estimated the TSS concentration. MSL SOP I-041-00 has been modified to reflect the changes in the type of filter used for isolation of the TSS. No other changes were made to the standard method protocol. The data are reported in units of mg/L.

The OSAL samples were measured using a YSI-30 S-C-T probe. The data are reported in practical salinity units (PSU). The TOC and DOC samples were analyzed using a High Temperature Catalytic Oxidation (HTCO) method. The instrument is specially equipped with high-salt sample combustion tube kit and halogen scrubber for seawater analysis. Seawater samples were acidified to pH <2 by concentrated hydrochloric acid (trace metal grade, Fisher Chemical) prior to analysis then sparged for 2 minutes to remove inorganic carbon (IC). The non-purgeable organic carbons (NPOC) in samples were further converted to CO_2 by oxidation at 680°C with a platinum catalyst. A non-dispersive infrared detector (NDIR) was used to detect the converted CO_2 for quantification of NPOC. The data are reported as both mg/L and µM.

HOLDING TIMES: All samples were analyzed within the established holding times of 90 days for Hg, six months for all other metals, 28 days for OC, and 7 days between collection and filtration for TSS.

DETECTION LIMITS: Laboratory method detection limits (MDLs) for seawater were reported from an Annually Verified Seawater MDL Study as determined by seven replicates of NASS Seawater. The freshwater MDL was reported from the Annually Verified Freshwater MDL Study determined using seven replicates of deionized water prepared using the TRM preparation. Reporting limits are determined as 3.18 times the laboratory achieved MDL. The data are evaluated and flagged as follows:

U Analyte not detected at or above the MDL, MDL reported
J Analyte detected above the MDL, but less than the RL
N Spiked sample recovery outside QC criterion of 70-130%
& Accuracy result outside QC criterion of ≤20% PD
* Precision result outside QC criterion of <30%
B Analyte detected in the method blank > RL and sample concentration < 10 times

DETECTION LIMITS (Continued):

detected blank value

c Exceeds data quality objective but meets one of the following contingency criterion:
  1 SRM certified <10x MDL or
  2 Insufficient spiking level relative to native sample concentrations

METHOD BLANKS: A minimum of three method blanks were analyzed by each instrument with each analytical batch for metals. The average method blank for each batch was less than the RL for all metals.

A triplicate analysis of 0.45µm PVDF dissolved trace metals filters was performed following a 5% HNO_3 cleaning. Zn values are flagged at a level of 0.0185-0.0779µg/L; one filter blank was B flagged at 0.006µg/L Cu; and one filter was J flagged at 0.0008µg/L Cd. For dissolved Zn data filter blanks may contribute to the FW sample and is <11% of the next lowest sample level. For Cu, filter blank contribution is <1% of the lowest field sample level. For Cd, filter blanks may contribute to the FW sample (which is J flagged), but contribute <1% to the next lowest field value. Only the FW sample values should be used with caution.

The method blank for TSS is a polycarbonate filter (Nucleopore) taken through the analytical process with each batch of samples. The blanks were all less than the MDL.

The method blanks for TOC and DOC were deionized water and all below the MDL. In addition, low carbon water (LCW) purchased from University of Miami was analyzed as part of the HTCO calibration curve to demonstrate that the instrumentation was not contributing carbon.

LABORATORY CONTROL SAMPLES: A minimum of one LCS (OPR or blank spike) was prepared and analyzed with each analytical batch of 20 or fewer samples for metals. Percent recoveries for LCS samples were within the QC acceptance criterion of 70% to 130% for all metals with the exception of total Al. The MS/MSD recoveries show this to be a spiking error, and there is no effect to the field data. The LCS matrix for the seawater samples was Sequim Bay Seawater prepared as both spiked and unspiked samples (e.g. SB LCS and SB Blank, respectively).

MATRIX SPIKE ACCURACY: A minimum of one set of duplicate matrix spikes (MS/MSD) was prepared and analyzed with each analytical batch of 20 or fewer samples for metals. Percent recoveries for matrix spikes were within the QC limits of 70% to 130% for all metals spiked at sufficient levels relative to native sample concentrations.

REPLICATE PRECISION: Laboratory precision was expressed as the relative percent difference (RPD) between laboratory duplicates. The RPD values for the laboratory duplicates were within the QC acceptance criterion of ±30% for all parameters detected above the RL.

STANDARD REFERENCE MATERIAL ACCURACY: Standard reference materials (SRM) were prepared and analyzed with each analytical batch at a minimum frequency of 1 per 20 or fewer samples. Analytical accuracy was expressed as the percent difference (PD) between the measured and the certified/ reference values. The SRM for Hg was 1641d, a freshwater SRM, as no seawater SRM was available. The SRM for Cd, Cr, Cu, Ni, Pb, and Zn, CASS-6, provides certified values for Cd, Cu, Ni, Pb, and Zn and a reference value for Cr. There is no seawater SRM for Al, for which accuracy is demonstrated by MS/MSD recovery of High Purity standards. The PDs were within the QC acceptance criterion of ≤ 20% with the exception of one Pb value (21%), which is still within the certified range provided by NRC-CNRC.

The freshwater SRM 1640a demonstrated analytical accuracy for each batch analyzed

STANDARD REFERENCE MATERIAL ACCURACY (Continued):

by ICP-MS with freshwater sample matrices (e.g. OF021). Percent recoveries were within the QC acceptance criterion.

The SRM is considered for data set evaluation only if it is not certified greater than 10 times the MDL. The CASS-6 certified values for Cd, Cr, Cu, and Ni are less than 10 times the MDL.

A salinity standard was used to verify the accuracy of the salinity measurements. The accuracy range was 0.3-1.7PD for all salinity measurements.

There are no SRMs available for TOC or DOC. University of Miami provides a laboratory consensus value for DOC in estuarine water http://yyy.rsmas.miami.edu/groups/biogeochem/CRM.html The average of the reference value range was used to calculate the PD for each replicate. The PDs ranged from 1 to 12%.

ALS ENVIRONMENTAL

Client:	Battelle Marine Science Lab	**Service Request No.:**	K1703145
Project:	March 2017 Ambient Monitoring (AMB23)	**Date Received:**	03/31/17
Sample Matrix:	Ocean Water		

Case Narrative

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV validation deliverables including summary forms and all of the associated raw data for each of the analyses. When appropriate to the method, method blank results have been reported with each analytical test.

Sample Receipt

Twenty-six ocean water samples were received for analysis at ALS Environmental on 03/31/17. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4ºC upon receipt at the laboratory.

General Chemistry Parameters

Total Phosphorus by EPA Method 365.3:
The Relative Percent Difference (RPD) criterion for the replicate analysis in sample AMB23-103/DYOTS was not applicable because the analyte concentration was not significantly greater than the Method Reporting Limit (MRL). Analytical values derived from measurements close to the detection limit are not subject to the same accuracy and precision criteria as results derived from measurements higher on the calibration range for the method.

Ammonia as Nitrogen by Standard Method 4500-NH3 E:
The Relative Percent Difference (RPD) criterion for the replicate analysis in sample AMB23-001/PS07 was not applicable because the analyte concentration was not significantly greater than the Method Reporting Limit (MRL). Analytical values derived from measurements close to the detection limit are not subject to the same accuracy and precision criteria as results derived from measurements higher on the calibration range for the method.

No other anomalies associated with the analysis of these samples were observed.

ALS ENVIRONMENTAL

Client:	Battelle Marine Science Lab	**Service Request No.:**	K1703450
Project:	March 2017 Ambient Monitoring (AMB23)	**Date Received:**	04/07/17
Sample Matrix:	Ocean Water		

Case Narrative

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV validation deliverables including summary forms and all of the associated raw data for each of the analyses. When appropriate to the method, method blank results have been reported with each analytical test.

Sample Receipt

Eighteen water samples were received for analysis at ALS Environmental on 04/07/17. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4ºC upon receipt at the laboratory.

General Chemistry Parameters

No anomalies associated with the analysis of these samples were observed.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

LOG-IN CHECKLIST

Reference SOP# MSL-A-001

Central File #: Block Sample No(s): 2142-2151 Batch: 66

Project Name: ENVVEST AMB23 Project Manager: Brandbigge

TO BE COMPLETED BY PROJECT MANAGER (prior to arrival when possible)

Matrix: SW WP#

Special Instructions:

See LIMS Sample Tracking for archive/disposal information

TO BE COMPLETED UPON SAMPLE ARRIVAL/LOG-IN

Yes	No	N/A	Indicate in Appropriate Box	
☐	☐	☑	Custody seal present Seal intact? YES NO	Cooler 1: 4c °C
☑	☐	☐	Cooler temperature (acceptable range: less than 6°C or solids:frozen) (if multiple coolers, note temp. of each cooler)	Cooler 2: °C
				Cooler 3: °C
				Cooler 4: °C
☐	☐	☑	Project Manager notified of any custody/login discrepancies (cooler temp, sponsor codes, etc) Comment/Remedy:	
☑	☐	☐	Were all chain of custody forms signed and dated?	
☑	☐	☐	Were samples filtered at MSL? ALL HALF (metals)	*Samples must be filtered prior to preservation!*

Sample condition(s): Acceptable Other (explain):

Container type: Teflon Poly Glass Cap. Vial Baggie Other:

Notes:

Completed By: Strivers Cooler Receipt Date/Time: 20170329 1600

SAMPLE PRESERVATION

☐ Sample(s) were preserved prior to arrival at MSL (noted on: CoC / Sample / per PM Instruction)

☐ Random pH checked for ~10% of samples (use dip paper) Sample IDs:

☐ Complete pH check required for project (use pH meter and record on pH Record form)

☑ Sample(s) were preserved at MSL

Type: ☑	0.2% HNO3	Notes: metals	Lot# 1214050
☐	0.5% HCl (Hg samples)	Notes:	Lot#
☑	Refrigerate/Freeze	Notes: R: TSS, Nutrients F: Toc, Doc	WHK in
☐	Other	Notes:	

Completed By: Strivers Preservation Date/Time: 20170329 1700

LOG-IN CHECKLIST

DAY 3

Reference SOP# MSL-A-001

Central File #: 31062 Sample No(s): 2152-2191 Batch: 67

Project Name: ENVVEST FY17 TASK 2 AMB23 Project Manager: Brandon Berger

TO BE COMPLETED BY PROJECT MANAGER (prior to arrival when possible)

Matrix: WP# N 00039

Special Instructions:

See LIMS Sample Tracking for archive/disposal information

TO BE COMPLETED UPON SAMPLE ARRIVAL/LOG-IN

Yes	No	N/A	Indicate in Appropriate Box	
☐	☐	☑	Custody seal present Seal intact? YES NO	
☑	☐	☐	Cooler temperature (acceptable range: less than 6°C or solids:frozen) (if multiple coolers, note temp. of each cooler)	Cooler 1: 2.4 °C; Cooler 2: 2.4 °C; Cooler 3: 2.4 °C; Cooler 4: 2.4 °C
☐	☐	☑	Project Manager notified of any custody/login discrepancies (cooler temp, sponsor codes, etc) Comment/Remedy:	
☑	☐	☐	Were all chain of custody forms signed and dated?	
☑	☐	☐	Were samples filtered at MSL? ALL (HALF)	Metals Samples must be filtered prior to preservation!

Sample condition(s): (Acceptable) Other (explain):

Container type: (Teflon) (Poly) (Glass) Cap. Vial Baggie Other:

Notes:

Completed By: Strivers Cooler Receipt Date/Time: 20170405 1730

SAMPLE PRESERVATION

☐ Sample(s) were preserved prior to arrival at MSL (noted on: CoC / Sample / per PM Instruction)

☐ Random pH checked for ~10% of samples (use dip paper) Sample IDs:

☐ Complete pH check required for project (use pH meter and record on pH Record form)

☑ Sample(s) were preserved at MSL

Type: ☑	0.2% HNO3	Notes:	Metals (TMC, DMC) Lot# 121405
☐	0.5% HCl (Hg samples)	Notes:	Lot#
☑	Refrigerate/Freeze	Notes:	R: TSS/SSC, Nutr. F: TOC, DOC
☐	Other	Notes:	

Completed By: Strivers Preservation Date/Time: 20170405 1832

AMB23 Outfall Compositing

OF018 (PW5)- New inline-piston autosampler system installed and tested for calibration accuracy in week prior to event. No problems found. Passcode for programming is 1062.

20170327- 8 pump cycles in previous 24 hours. Programmed to 1-25mL aliquot every 65 seconds during pumpdowns (~1hr ea). First sample taken at 0948 (~10 minutes into an active pumpdown). Grease coating in sampler port was wiped out with paper towels until no black coloring was evident on the towel.

20170328- 8 pumpdown cycles occurred during the sampling event which was stopped at 0845. 507 total aliquots collected. Average pumpdown time was 1.14hrs. Collection jar overflowed; suspect problem with calibration must have occurred due to aliquot*volume<15L. Split were taken from the sample in collection jug.

OF019 (PW6)- Signal line to ISCO was non-functional.

20170327- 26 pump cycles in previous 24 hours. Set up a direct collection line from port on ceiling with plastic valve ~0.5m prior to collection jug. Plan was to collect 5 manual grabs over 24 hours. First grab occurred at 1208, second at 1250. At 1400 Rory found that shut-off valve failed and collection jar overflowed. Sample was dumped.

20170328- Collected single grab sample at 1029.

OF021 (steamplant)- Autosampler did not give option for aliquot number, and automatically reverted to continuous mode.

20170327- Set to take 156mL aliquot every 15 minutes starting at 1109.

20170328- Collected jug at 0930 (~90% full). 89 successful aliquots.

Data Qualifiers
Ambient Monitoring - AMB24
ENVVEST Aug 2017

DATA QUALIFIERS:

c	Exceeds DQO but meets contingency criteria of either:
1	SRM certified <10x MDL
2	Insufficient spiking level relative to native sample concentrations
U	Analyte not detected at or above the MDL, MDL reported
J	Analyte detected above the MDL, but less than the RL
--	Not analyzed
NA	Not applicable/available
N	Spiked sample recovery outside QC criterion of 70-130%
NC	Not Certified
&	Accuracy result outside QC criterion of ≤20% PD
*	Precision result outside QC criterion of <30%
NS	Sample not spiked for this analyte
B	Analyte detected in the method blank > RL
	and sample concentration < 10 times detected blank value
b	Data are blank corrected using the batch specific procedural blank
[1]	Reported from the nucleopore filtration method instead of GF/C filters
[2]	Seawater DOC CRM and low carbon water (LCW) were purchased from University of Miami http://yyy.rsmas.miami.edu/groups/biogeochem/CRM.html
[3]	Sample bottle cracked, no data reported
[4]	The laboratory DI water was found to be elevated in OC. The samples were not impacted by the DI water issue. See the QC narrative for more discussion.
HTCO	High Temperature Catalytic Oxidation

PROJECT: Sinclair and Dyes Inlet Ambient Monitoring, August 2017 (AMB24)

PARAMETER: Total and Dissolved Metals – Al (total only), Cd, Cr, Cu, Ni, Pb, Zn, Hg
Total Suspended Solids (TSS), Salinity (OSAL), Dissolved Organic Carbon (DOC), and Total Organic Carbon (TOC)

LABORATORY: Battelle Marine Sciences Laboratory (MSL), Sequim, Washington

MATRIX: Seawater and Freshwater

SAMPLE CUSTODY AND PROCESSING: Samples were collected from Sinclair and Dyes Inlet region by MSL and the U.S. Navy on 08/22/2017 and 08/23/2017. Samples were hand delivered to MSL by the field team. All samples were received in good condition. Samples were assigned a Battelle Central File (CF) identification number (3106) and were entered into Battelle's sample tracking system. Upon receipt at MSL, the samples designated for total and dissolved metals (TME/DME) were shaken vigorously and approximately 500mL was filtered through a pre-cleaned 0.45µm polyvinylidene fluoride (PVDF) filter membrane inside a class 100 clean bench and the filtrate was transferred to a trace metal clean Teflon bottle. The dissolved and total fractions were each acidified to a pH of < 2.0 with double distilled nitric acid. The samples for TSS and OSAL were stored at 4.0±2°C in low density polyethylene bottles prior to analysis. The samples for TOC and DOC were collected in pre-cleaned glass and stored at -20°C until analyses.

The following lists information on sample receipt and processing activities:

Sample Receipt Dates:	08/22/2017 and 08/23/2017
Cooler temp. on arrival	All coolers were <6.0°C on arrival
Collection dates	08/22/2017 and 08/23/2017
TSS analysis dates	08/27/17 and 08/28/17
OSAL analysis dates	08/27/17 and 08/28/17
CVAF analysis dates (Hg)	08/28/17 - 09/23/17
TRM Prep/Freshwater Analysis by ICP-MS (Al, Cd, Cr, Cu, Ni, Pb, Zn)	09/11/17 – 09/18/17
Online Preconcentration/Direct Seawater Analysis by ICP-MS (Al, Cd, Cr, Cu, Ni, Pb, Zn)	09/11/17 – 09/19/17
TOC/DOC Analysis Date	08/30/17 – 09/16/17

QA/QC DATA QUALITY OBJECTIVES FOR SEAWATER SAMPLES:

Mercury	CVAF	70-130%	≤20%	≤30%	0.10 ng/L	0.32 ng/L

METHODS:

Freshwater and seawater samples were analyzed for eight metals: aluminum (Al), cadmium (Cd), chromium (Cr), copper (Cu), nickel (Ni), lead (Pb), zinc (Zn), and mercury (Hg). Samples were submitted for analyses by MSL methods.

Both freshwater and seawater samples were analyzed for Hg by Cold Vapor Atomic Fluorescence (CVAF) in accordance with Battelle SOP *MSL-I-013, Total Mercury in Aqueous Samples by CVAF*, following EPA Method 1631 revision E. The Hg data are reported in ng/L.

Seawater samples were analyzed for Al and Cr via direct injection at 15x dilution. All other metals were analyzed using a preconcentration via seaFast chelation step in accordance with Battelle SOP *MSL-I-022, Methods of Sample Preconcentration: Online Preconcentration for Trace Metals Analysis in Water*. Seawater samples were analyzed by Inductively Coupled Plasma-Mass Spectrometry (ICP-MS) in accordance with Battelle SOP *MSL-I-022, Determination of Elements in Aqueous and Digestate*

METHODS (cont): *Samples by ICP/MS*. The base methods for this procedure are EPA Method 1638 and EPA Method 1640. The ICP-MS data were reported in units of µg/L. Freshwater samples identified as <5% seawater were analyzed for all metals, other than Hg, by ICP-MS following the preparation method for total recoverable metals (TRM) described in EPA Method 1640. The analysis for Hg does not require a different method for freshwater versus saltwater.

The preconcentration procedure for seawater samples analyzed by ICP-MS for events prior to AMB20 included the addition of chelating agents to induce precipitation of metals under specific conditions. Therefore the ICP-MS method included a matrix match step to correct for trace impurities of metals added during the preconcentration step. In previous AMB data sets, the mean reagent blank for each analytical batch was subtracted from the reported sample concentration after the analyses were completed and data were qualified with a "b". The new ICP-MS analytical method does not require this type of correction. No flags are required for this data set. This method shift has been documented in a manuscript entitled *Method Review for Trace Metals in Seawater: Automated Online Pre-concentration vs Borohydride Reductive Precipitation of Nearshore Seawater Samples for Analysis of Ni, Cu, Zn, Cd, and Pb via ICP-MS*, where events 17 and 19 were analyzed using both methods.

The TSS samples were analyzed following SM2540Dmod using a gravimetric analysis. A modification occurs in the use of a polycarbonate filter versus a glass fiber filter. A comparison between the glass fiber filters (GF/C) and the polycarbonate was conducted on AMB10 and AMB11 samples. In almost all cases the GF/C filters over estimated the TSS concentration. MSL SOP I-041-00 has been modified to reflect the changes in the type of filter used for isolation of the TSS. No other changes were made to the standard method protocol. The data are reported in units of mg/L.

The OSAL samples were measured using a YSI-30 S-C-T probe. The data are reported in practical salinity units (PSU).

The TOC and DOC samples were analyzed using a High Temperature Catalytic Oxidation (HTCO) method: *MSL-W-011 Determination of Total and Dissolved Organic Carbon in Seawater by high Temperature Catalytic Oxidation*. The instrument is specially equipped with a high-salt sample combustion tube kit and halogen scrubber for seawater analysis. Seawater samples were acidified to pH <2 by concentrated hydrochloric acid (trace metal grade, Fisher Chemical) prior to analysis then sparged for 2 minutes to remove inorganic carbon (IC). The non-purgeable organic carbons (NPOC) in samples were further converted to CO_2 by oxidation at 680°C with a platinum catalyst. A non-dispersive infrared detector (NDIR) was used to detect the converted CO_2 for quantification of NPOC. The data are reported as both mg/L and µM.

HOLDING TIMES: All samples were analyzed within the established holding times of 90 days for Hg, six months for all other metals, 28 days for OC, and 7 days between collection and filtration for TSS.

DETECTION LIMITS: Laboratory method detection limits (MDLs) for seawater were reported from an Annually Verified Seawater MDL Study as determined by seven replicates of NASS Seawater. The freshwater MDL was reported from the Annually Verified Freshwater MDL Study determined using seven replicates of deionized water prepared using the TRM preparation. Reporting limits are determined as 3.18 times the laboratory achieved MDL. The data are evaluated and flagged as follows:

U Analyte not detected at or above the MDL, MDL reported
J Analyte detected above the MDL, but less than the RL

DETECTION LIMITS (Continued):

N Spiked sample recovery outside QC criterion of 70-130%
& Accuracy result outside QC criterion of ≤20% PD
* Precision result outside QC criterion of <30%
B Analyte detected in the method blank > RL and sample concentration < 10 times detected blank value
c Exceeds data quality objective but meets one of the following contingency criterion:
  1 SRM certified <10x MDL or
  2 Insufficient spiking level relative to native sample concentrations

METHOD BLANKS:

A minimum of three method blanks were analyzed by each instrument with each analytical batch for metals. All method blanks for each batch were less than the DL.

A triplicate analysis of 0.45µm PVDF dissolved trace metals filters was performed following a 5% HNO_3 cleaning. Values were flagged in comparison to freshwater reporting limits; only low level Zn and Ni may have seen an impact at seawater reporting limits. For dissolved Zn data, filter blank levels likely contribute to samples AMB24-207 and AMB24-211. For Ni, filter blank levels likely contribute to samples AMB24-001, AMB24-010, AMB24-020 and AMB24-204. Re-analysis of the listed dissolved samples verified the reported values. Dissolve Ni is not included in the project SOW, but is included as supporting data at no additional cost.

The method blank for TSS is a polycarbonate filter (Nucleopore) taken through the analytical process with each batch of samples. The blanks were all less than the MDL.

The method blanks for TOC and DOC were deionized water and all were below the MDL. In addition, low carbon water (LCW) purchased from University of Miami was analyzed at a rate of 1 per 8 samples to demonstrate that the instrumentation was not contributing carbon.

LABORATORY CONTROL SAMPLES:

A minimum of one LCS (OPR or blank spike) was prepared and analyzed with each analytical batch of 20 or fewer samples for metals. Percent recoveries for LCS samples were within the QC acceptance criterion of 70% to 130% for all metals with the exception of total Al. The MS/MSD recoveries show this to be a spiking error, and there is no effect to the field data. The LCS matrix for the seawater samples was Sequim Bay Seawater prepared as both spiked and unspiked samples (e.g. SB LCS and SB Blank, respectively).

MATRIX SPIKE ACCURACY:

A minimum of one set of duplicate matrix spikes (MS/MSD) was prepared and analyzed with each analytical batch of 20 or fewer samples for metals. Percent recoveries for matrix spikes were within the QC limits of 70% to 130% for all metals spiked at sufficient levels relative to native sample concentrations.

REPLICATE PRECISION:

Laboratory precision was expressed as the relative percent difference (RPD) between laboratory duplicates. The RPD values for the laboratory duplicates were within the QC acceptance criterion of ±30% for all parameters detected above the RL, with the exception of THg samples. THg replication was affect by high TSS levels observed in this event; THg MSD values verify replication.

STANDARD REFERENCE MATERIAL ACCURACY:

Standard reference materials (SRM) were prepared and analyzed with each analytical batch at a minimum frequency of 1 per 20 or fewer samples. Analytical accuracy was expressed as the percent difference (PD) between the measured and the certified/ reference values. The SRM for Hg was 1641d, a freshwater SRM, as no seawater SRM was available. The SRM for Cd, Cr, Cu, Ni, Pb, and Zn, CASS-6, provides certified values for Cd, Cu, Ni, Pb, and Zn and a reference value for Cr. There is no seawater SRM for Al, for which accuracy is demonstrated by MS/MSD recovery of High Purity

STANDARD

REFERENCE MATERIAL ACCURACY (Continued):

standards. The PDs were within the QC acceptance criterion of ≤ 20%.

The freshwater SRM 1640a demonstrated analytical accuracy for each batch analyzed by ICP-MS with freshwater sample matrices (e.g. OF021). Percent recoveries were within the QC acceptance criterion.

The SRM is considered for data set evaluation only if it is not certified greater than 10 times the MDL. The CASS-6 certified values for Cd, Cr, Cu, and Ni are less than 10 times the MDL.

A salinity standard was used to verify the accuracy of the salinity measurements. The accuracy range was 0.3-2.1 PD for all salinity measurements.

There are no SRMs available for TOC or DOC. University of Miami provides a laboratory consensus value for DOC in estuarine water http://yyy.rsmas.miami.edu/groups/biogeochem/CRM.html The average of the reference value range was used to calculate the PD for each replicate. The PDs ranged from 1 to 9%.

ALS ENVIRONMENTAL

Client:	Battelle Marine Sciences Lab	**Service Request No.:**	K1709013
Project:	AUGUST 2017 ENVVEST (AMB24)	**Date Received:**	08/25/17
Sample Matrix:	Ocean Water		

Case Narrative

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV validation deliverables including summary forms and all of the associated raw data for each of the analyses. When appropriate to the method, method blank results have been reported with each analytical test.

Sample Receipt

Forty-four ocean water samples were received for analysis at ALS Environmental on 08/25/17. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4ºC upon receipt at the laboratory.

General Chemistry Parameters

Ammonia by SM 4500-NH3 E:
The Relative Percent Difference (RPD) criterion for the replicate analysis in sample AMB24-006/BJEST was not applicable because the analyte concentration was not significantly greater than the Method Reporting Limit (MRL). Analytical values derived from measurements close to the detection limit are not subject to the same accuracy and precision criteria as results derived from measurements higher on the calibration range for the method.

No other anomalies associated with the analysis of these samples were observed.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

LOG-IN CHECKLIST

Reference SOP# MSL-A-001

Central File #: 31060 Sample No(s): 2213- Batch: 69

Project Name: ENVEST AMB 24, FY17 Project Manager: Brandenburger

TO BE COMPLETED BY PROJECT MANAGER (prior to arrival when possible)

Matrix: Seawater / FW WP# N93629

Special Instructions:

See LIMS Sample Tracking for archive/disposal information

TO BE COMPLETED UPON SAMPLE ARRIVAL/LOG-IN

Yes	No	N/A	Indicate in Appropriate Box
☐	☐	☒	Custody seal present Seal intact? YES NO
☒	☐	☐	Cooler temperature (acceptable range: less than 6°C or solids:frozen) (if multiple coolers, note temp. of each cooler)
☐	☐	☒	Project Manager notified of any custody/login discrepancies (cooler temp, sponsor codes, etc)

Cooler 1: 5 °C
Cooler 2: 5 °C
Cooler 3: 5 °C
Cooler 4: 5 °C

Comment/Remedy:

☒	☐	☐	Were all chain of custody forms signed and dated? DMB
☒	☐	☐	Were samples filtered at MSL? ALL (HALF)

Samples must be filtered prior to preservation!

Sample condition(s): (Acceptable) Other (explain):

Container type: (Teflon) (Poly) (Glass) Cap. Vial Baggie Other:

Notes:

Completed By: [signature] Cooler Receipt Date/Time: 20170822 1845

SAMPLE PRESERVATION

☐ Sample(s) were preserved prior to arrival at MSL (noted on: CoC / Sample / per PM Instruction)

☐ Random pH checked for ~10% of samples (use dip paper) Sample IDs:

☐ Complete pH check required for project (use pH meter and record on pH Record form)

☒ Sample(s) were preserved at MSL

Type:			
☒	0.2% HNO3	Notes: TMB, DMB	Lot# 121660550
☐	0.5% HCl (Hg samples)	Notes:	Lot#
☒	Refrigerate/Freeze	Notes: TOC, DOC → Freezer, TSS/OSAL, Nutr → Ref	
☐	Other	Notes:

LOG-IN CHECKLIST

Reference SOP# MSL-A-001

Central File #: 31062 Sample No(s): 2267-2308 Batch: 70

Project Name: ENVVEST AMB24, FY17 Project Manager: Brandenberger

TO BE COMPLETED BY PROJECT MANAGER (prior to arrival when possible)

Matrix: SW WP# N93C029

Special Instructions:

See LIMS Sample Tracking for archive/disposal information

TO BE COMPLETED UPON SAMPLE ARRIVAL/LOG-IN

Yes	No	N/A	Indicate in Appropriate Box
☐	☐	☒	Custody seal present Seal intact? YES NO
☒	☐	☐	Cooler temperature (acceptable range: less than 6°C or solids:frozen) (if multiple coolers, note temp. of each cooler)
☐	☐	☒	Project Manager notified of any custody/login discrepancies (cooler temp, sponsor codes, etc)
☒	☐	☐	Were all chain of custody forms signed and dated?
☒	☐	☐	Were samples filtered at MSL? ALL HALF

Cooler 1: 4.5 °C
Cooler 2: 4.5 °C
Cooler 3: 4.5 °C
Cooler 4: 4.5 °C

Comment/Remedy:

Samples must be filtered prior to preservation!

Sample condition(s): Acceptable Other (explain):

Container type: Teflon Poly Glass Cap. Vial Baggie Other:

Notes:

Completed By: Strivens Cooler Receipt Date/Time: 20170823 1930

SAMPLE PRESERVATION

☐ Sample(s) were preserved prior to arrival at MSL (noted on: CoC / Sample / per PM Instruction)

☐ Random pH checked for ~10% of samples (use dip paper) Sample IDs:

☐ Complete pH check required for project (use pH meter and record on pH Record form)

☒ Sample(s) were preserved at MSL

Type:
- ☒ 0.2% HNO3 Notes: TMe, DMe Lot# 121C0850
- ☐ 0.5% HCl (Hg samples) Notes: Lot#
- ☒ Refrigerate/Freeze Notes: Ref: T&S/OSM, Nutr., Frz: TOC, DOC
- ☐ Other Notes:

Completed By: Strivens Preservation Date/Time: 20170823 2000

LOG-IN CHECKLIST

Reference SOP# MSL-A-001

Central File #: 3106 Sample No(s): 2192-2212 Batch: 68

Project Name: ENVVEST AMB 24 Project Manager: JB/JS

TO BE COMPLETED BY PROJECT MANAGER (prior to arrival when possible)

Matrix: WP#

Special Instructions:

See LIMS Sample Tracking for archive/disposal information

TO BE COMPLETED UPON SAMPLE ARRIVAL/LOG-IN

Yes	No	N/A	Indicate in Appropriate Box		
		X	Custody seal present	Seal intact? YES NO	Cooler 1: °C
		X	Cooler temperature (acceptable range: less than 6°C or solids:frozen) (if multiple coolers, note temp. of each cooler)		Cooler 2: °C Cooler 3: °C Cooler 4: °C
X			Project Manager notified of any custody/login discrepancies (cooler temp, sponsor codes, etc)		
			Comment/Remedy:		
X			Were all chain of custody forms signed and dated?		
		X	Were samples filtered at MSL?	ALL HALF	*Samples must be filtered prior to preservation!*

Sample condition(s): Acceptable Other (explain):

Container type: Teflon Poly Glass Cap. Vial Baggie Other:

Notes:

Completed By: Cooler Receipt Date/Time: 8/17/17 10:00

SAMPLE PRESERVATION

- [ ] Sample(s) were preserved prior to arrival at MSL (noted on: CoC / Sample / per PM Instruction)
- [ ] Random pH checked for ~10% of samples (use dip paper) Sample IDs:
- [ ] Complete pH check required for project (use pH meter and record on pH Record form)
- [ ] Sample(s) were preserved at MSL

Type:
- [X] 0.2% HNO3 Notes: stock) 2200-2212 Lot# 12/6050
- [ ] 0.5% HCl (Hg samples) Notes: Lot#
- [ ] Refrigerate/Freeze Notes:
- [ ] Other Notes:

Completed By: Preservation Date/Time: 8/17/17 10:00 + 8/18/17 15:00

Storage Shelf: K-4-B

Packing material: *Inserts* *Baggies* (*Bubble Wrap*) (*Gel Packs*) *Wet Ice* *Dry Ice* *Sleeves* _____

Were custody papers properly filled out (ink, signed, etc.)? NA (Y) N

Were samples received in good condition (temperature, unbroken)? *Indicate in the table below.* NA (Y) N

If applicable, tissue samples were received: *Frozen* *Partially Thawed* *Thawed*

Were all sample labels complete (i.e analysis, preservation, etc.)? NA (Y) N

Did all sample labels and tags agree with custody papers? *Indicate major discrepancies in the table on page 2.* NA (Y) N

Were appropriate bottles/containers and volumes received for the tests indicated? NA (Y) N

Were the pH-preserved bottles (*see SMO GEN SOP*) received at the appropriate pH? *Indicate in the table below* NA (Y) N

Were VOA vials received without headspace? *Indicate in the table below.* (NA) Y N

Was C12/Res negative? (NA) Y N

AMB24 Outfall Compositing

OF018 (PW5)-

20170821- 6 pump cycles in previous 24 hours. Next pump-down cycle ~4 hours from program initiation. Auto-sampler (piston type) was programmed to take 1-25mL aliquot every 57s with a 3s pulse time; 60s cycles. Program was initiated at 1315 to run for 24 hours.

20170822- 6 pumpdown cycles were successfully captured; 342 aliquots total when collected at 1222; average pumpdown time 1.42 hours. 10L sample jug was ~90% full. Note: Pumpwell workers were using a grinder and welder to install new hand-railing ~15ft from sample jar prior to collection.

OF019 (PW6)-

20170821- 23 cycles in previous 24 hours. Started ISCO at 1342 using program modification form 20170804 notes.

20170822- 10L sampling jar ~95% full when collected at 1318. 29 pumpdown cycles were captures; 163 aliquots total.

OF021 (steamplant)-

20170821- Autosampler was started in timed composite mode at 1430; to sample every 15 minutes; 156mL per aliquot; 96 total reps.

20170822- 94 aliquots were successfully collected at time of jug collection, 1405; 1 sample was missed; 1 sample was remaining in program. Sample jug was ~95% full.
